Thread: [TuT on how to set up Cybergate \(Very Easy\)](#)

kidcodii - July 22, 2010, 11:47 pm

This is my first TuT(Tutorial) tell me how i did and comment to tell me how it went. If you have any questions or need help setting this up send me a PM(private Message). Thanks and Good Luck! :)

Sites we will use

<http://www.cyber-sec.org/>

&

<http://www.no-ip.com/>

The first thing you will need to download is Cybergate. You may use any version you would like v1.07.5, v1.05.1, or v1.04.8. They all set up the same.

To download Cybergate go to <http://www.cyber-sec.org/> and click the tab that says CYBERGATE RAT, after you click that it should pop up a new tab.

[img]<http://reforced.net/uploads/20100722221807Picture3-1.png>[/img]

On this tab look on the right side and click the tab that says RELEASES, here you can download the version of cybergate you wish to hack with.

After you download Cybergate extract the file, open it but don't go any further.

Next you will need to go to <http://www.no-ip.com/> and go to the DOWNLOAD tab. After you click the download tab click Windows and go to the bottom of the page to download DUC 2.2.1 client

[img]<http://reforced.net/uploads/20100722224402Picture8-1.png>[/img]

After you download DUC 2.2.1 client make an account on no-ip and verify your email. (Remember your info for your account you will need it later)

Once signed on to you verified account go to ADD A HOST, there you will make a hostname. Do not mess with any other settings, just type your hostname and select no-ip.org on the drop down list like so.

[img]<http://reforced.net/uploads/20100722232053Picture10-1.png>[/img]

After you enter your hostname go to the bottom of the page and click CREAT HOST

Now X(exit) out of everything. We can now create our server on cybergate.

open Cybergate and go to Control Center, Start.

Next go to Control Center, DNS Console.

Here, you need to open No-ip/DUC 2.2.1 client (the download from No-ip) and sign in to it with your info from No-ip.com. after you sign in you will see a smiley face with glasses. uncheck and check the box next to the smile face until he blushes. When he blushes keep it checked and X(exit) no-ip.

[img]<http://reforced.net/uploads/20100722235659Picture11-1.png>[/img]

Next, fill in the information like i did above then click update until it says Success : DNS Hostname Update Successful . after it says that you can X(exit) the DNS Console Box.

Now you are going to go to Start, Options, Select Listening Ports. Here you will decide which port you will use. it doesn't matter which port you use. you can use anything between 1 and 65535 i usually use 80, 82, or 999. its your choice.

When you choose which port you want to use type it in the top box and click the blue arrow pointing to the left.

[img]<http://i176.photobucket.com/albums/w165/zerorider343/Picture12.png>[/img]

After you set a port type in your Connection Password and remember it. i suggest you use the same password as you did on no-ip.

After you choose a port and make a password click Save.

Now you can start creating your server, go to Control Center, Builder, and Create Server.

First create a user, I usually just use 0 because its the easiest. After you make one highlight it with your mouse and click the blue arrow that says Forward.

The next Tab is Connection. highlight the default DNS and Port then delete it and ADD a new one but put your I Pv4 Address:then port your using. if you don't know what your I Pv4 Address is you can go back to DNS Console and auto detect it or go to your start and type cmd, once this is open type ipconfig and it should be right there. it should look something like this 10.0.0.14 but i just put random numbers in there. In the boxes to the right put your user for identification and put the same password you used for your connection.

[img]<http://i176.photobucket.com/albums/w165/zerorider343/Picture14.png>[/img]

The next tab is Instillation. Pretty much just copy what you see in this picture but remember to click both the random buttons plenty of times.

[img]<http://i176.photobucket.com/albums/w165/zerorider343/Picture15.png>[/img]

The next tab is a message box, this is optional.

[img]http://i176.photobucket.com/albums/w165/zerorider343/Picture16.png[/img]

The next tab is Key logger, the only thing you need checked is Active key logger and DELETE (Backspace). Those are the only two things to mess with so I'm not going to put a picture.

The next tab is anti-debug, you usually always check all them unless your running your server off anything other than a PC like a VMware Or Sandboxie.

[img]http://i176.photobucket.com/albums/w165/zerorider343/Picture18.png[/img]

The last tab is Create Server, all you need are Use Icon and Compress With UPX checked on this. After you have all the tabs filled out you can click Create Server and save the virus.

[img]http://i176.photobucket.com/albums/w165/zerorider343/Picture19.png[/img]

Now run it on your own computer and see if it works!

If it doesn't you didn't do one of my steps correctly but if you send me a PM i will help you fix these problems

Good luck and i hope i helped you out with this TuT!

Livewire - July 22, 2010, 11:53 pm

I've seen so many Cybergate tutorials.

Could have made it more appealing.
Nonetheless, good job.

Robbie - July 22, 2010, 11:54 pm

Can't believe this was you in only 12 posts here, but who am I to judge? Good job. :)

kidcodii - July 22, 2010, 11:59 pm

that shit took forever haha i got really bored and need something to do so there ya go :)

Phizo - July 23, 2010, 12:19 am

Very nice tutorial, I hope you didn't rip it. Also, I think this is in the wrong section. I believe it should be in 'hacking tutorials', then again this is beginner stuff. I'm going to be 50-50 on this. Correct me if I am wrong though.

Unlimited15 - July 23, 2010, 12:23 am

for the 1pv4 or whatever ip it is, don't you put in your no-ip if you are using it?

kidcodii - July 23, 2010, 12:26 am

well theres a thing where it auto detect it for you, thats what i reffered back to.

(Jul 23, 2010 12:19 AM)Phizo Wrote: [\[CITE\]](#) Very nice tutorial, I hope you didn't rip it. Also, I think this is in the wrong section. I believe it should be in 'hacking tutorials', then again this is beginner stuff. I'm going to be 50-50 on this. Correct me if I am wrong though.

yeah your prolly right hahah i thought it was an easy simple hack that n00bs could prolly handle thats the only reason i put it here..

Unlimited15 - July 23, 2010, 12:32 am

(Jul 23, 2010 12:26 AM)kidcodii Wrote: [CITE](#) well theres a thing where it auto detect it for you, thats what i reffered back to.

yeah your proolly right hahah i thought it was an easy simple hack that n00bs could proolly handle thats the only reason i put it here..

so i set my server up but instead of the 1vp4 ip i left it as my *no-ip address*:82 (82 = port i forwarded)

will it still work?

kidcodii - July 23, 2010, 12:34 am

i tryed that onces but that was when i was fist trying to set up my RAT and it didnt work for me but it could have been something different.. if you need help i can team view you.

Unlimited15 - July 23, 2010, 12:41 am

so i need to make a whole new server? :(

kidcodii - July 23, 2010, 12:45 am

noo i dont think so lol its harder to tell soeone how to do it in text if i did it myself i could get it done in like 3 to 5 min maybe less

Unlimited15 - July 23, 2010, 12:50 am

it just did it anyways only reason im complaining is i want victims but its 4am lol sleep time

kidcodii - July 23, 2010, 12:53 am

what kind of crypter do you have?

dennis1573 - July 28, 2010, 11:18 am

nice tut man?, you are very talented

Darrenxx5 - July 28, 2010, 11:24 am

Worked for me, nice guide ????

jobo1234 - July 28, 2010, 11:48 am

best tutorial that i have seen so far

Schizoid™ - July 28, 2010, 11:51 am

HMMMM... IF you really made this... Be proud... Its verry good..

edwardj7337 - July 28, 2010, 12:24 pm

So we add our IP from computer or the NO-IP. It makes sense to put our IP.

kidcodii - July 28, 2010, 8:37 pm

Thanks everyone and yeah i really made this hahah if you look at one of the pic's it says kidcodi on no-ip.

If anyone has questions PM me.

Thanks

edwardj7337 - July 29, 2010, 1:25 pm

Ok, so when he means we can test the server on ourselves does it mean this setup isn't for victims

but just to test or what?

kidcodii - July 29, 2010, 9:34 pm

bro any questions pm me.

no thats just a test you will be able to infect victims you just need to find a crypter and spread

Crypt3r - July 30, 2010, 3:26 am

tanks man very usefull and will help lot of people

edwardj7337 - July 30, 2010, 5:55 pm

(Jul 29, 2010 09:34 PM)kidcodii Wrote: [\[CITE\]](#) bro any questions pm me.

no thats just a test you will be able to infect victims you just need to find a crypter and spread

You misread! With the setup you gave us will we be able to then later send our servers to victims? I know that I have to crypt and stuff...

For the DNS connection are you sure its our IP address or our No-IP or can we use both?

Snarr - July 30, 2010, 6:18 pm

Great job, good tutorial for beginner ratters.

kidcodii - July 30, 2010, 7:15 pm

yeah it doesnt matter i never use the no-ip user because every time i try it doesnt work.

XIHackerJpIX - August 1, 2010, 3:51 pm

cybergate is a fake virus right

kidcodii - August 1, 2010, 6:02 pm

hahahaha how is it fake????

kidcodii - August 1, 2010, 8:39 pm

Hey guys keep this TuT going and tell me how it went!

Thanks. Keep the convo's goin! :)

HF DarkSider - August 1, 2010, 9:26 pm

Great Tutorial very helpful

kidcodii - August 2, 2010, 2:22 am

thanks. anyone that likes could you please 5 star the Tut and help me out with rep? thanks i appreciate it and hope you do well with this tut. any questions pm me.

azerty39 - August 2, 2010, 3:03 am

hi,

I have a problem, when I test on me, it work, but when I test on friend, don't work

My server is FUD, and correctly setting up

So why??

Plutonium - August 2, 2010, 3:53 am

Hrmpf, Didn't you notice that I already made one? Check in the Cybergate Section -.-

zIFulLILeTe - August 2, 2010, 4:49 am

im gonna try this TuT, im having a lil prob creating my server.. thanks

Plutonium - August 2, 2010, 4:50 am

(Aug 2, 2010 04:49 AM)zIFuLLILeTe Wrote: [\[CITE\]](#) im gonna try this TuT, im having a lil prob creating my server.. thanks

<https://hackforums.net/showthread.php?tid=545871>

Try that one instead ;)

mr_wanted_sid - August 2, 2010, 10:34 am

hey bro your TUT is superb i really enjoy this one.. but bro there is a problem server wich i have created its working on my own computer but not something happening when i send it to victem :-? pliz if u can help me send me a email on this id creazy.worrior@yahoo.com thank you so much:X

Plutonium - August 2, 2010, 10:38 am

kidcodii - August 2, 2010, 1:17 pm

Plutonium get the fuck out of here my Tut is fine. fuck off bro. i can help them.

Plutonium - August 2, 2010, 1:20 pm

(Aug 2, 2010 01:17 PM)kidcodii Wrote: [\[CITE\]](#) Plutonium get the fuck out of here my Tut is fine. fuck off bro. i can help them.

True, But I posted my tutorial BEFORE you.

kidcodii - August 2, 2010, 2:29 pm

aight bro i dont care we are both here to help just help ppl on your TuT and ill help the ones on mine.

Vorian - August 2, 2010, 3:32 pm

I have a problem... I can infect myself (i appear on the list) but when my friend dls it and start it nothing happens not counting the error.

So what I could do wrong? The first idea is that i have to make an user for him. But thats stupid, because creating a new user for any new person would suck...

So, any ideas?

Dr. Dre - August 2, 2010, 3:57 pm

nice tutorial man thanks for it.

H4Z3Y - August 2, 2010, 5:53 pm

I'm using DUC 3.0.4 and it doesn't have the smiley face. Will it still work with the newer version of the no-ip program or should I download the old 2.2.1 client?

kidcodii - August 2, 2010, 6:07 pm

BguyTheKing - August 4, 2010, 2:35 am

Very nice and detailed tutorial. I suggest you posting it into the RAT section.

Satisfactory - August 5, 2010, 9:50 pm

I am the guy who made this Tut i started a new account once again because my rep being fucked with constantly.. hit me up on here.

Cryptography - August 5, 2010, 10:27 pm

Very Nice tut....:) Gotta try this ! :D

chrisdenkule - August 6, 2010, 12:59 am

After i have portforward it still wont work ! :(are some know the fail :)?

After i have portforward it still wont work ! :(are some know the fail :)?

Ben. - August 6, 2010, 3:10 am

it looks like a tut ive seen around but its good but i already know how to set it up and still read it :/

kidcodii - August 8, 2010, 2:35 am

you havnt seen it around lol it took me like and hour and a half to make this shit haha

BguyTheKing - August 8, 2010, 3:46 am

there are a million tuts on cybergate. And you posted it in the wrong section

kidcodii - August 8, 2010, 5:31 pm

actually i didnt it is begginer stuff just shut up if you dont have anything good to say

blksith0 - August 8, 2010, 5:51 pm

Pretty bad tutorial. I know its your first, but god, at least try. Learn to crop. You can use imgjoe to upload and crop images.

<http://www.imgjoe.com/>

kidcodii - August 8, 2010, 8:24 pm

<http://www.imgjoe.com/>

what Tut have you made? shut the fuck up with your -10

kidcodii - August 9, 2010, 3:25 am

hey guys help me out by telling me if it went well, i want to help people out so keep this thread up.

Black Shadow - August 9, 2010, 3:50 pm

Yes i liked it ?

kidcodii - August 9, 2010, 11:44 pm

(Aug 9, 2010 03:50 PM)Black Shadow™ Wrote: [\[CITE\]](#) Yes i liked it ?
thanks man :) help me out with rep? :)

good luck

lblissett - August 10, 2010, 2:50 am

good tut. . one question, why you use older version of NO-IP DUC? New ver. OK too ?

XxPneubxX - August 10, 2010, 10:28 am

i really need help cybergate just keeps crashing and getting deleted then im left with some config setting files and sqlite3.dll

kidcodii - August 10, 2010, 4:49 pm

(Aug 10, 2010 10:28 AM)XxPneubxX Wrote: [\[CITE\]](#) i really need help cybergate just keeps crashing and getting deleted then im left with some config setting files and sqlite3.dll
pm me
too fucking short.

ariton - August 10, 2010, 4:54 pm

They are many tuts like this, but anyway, good work!

kidcodii - August 10, 2010, 4:56 pm

(Aug 10, 2010 04:54 PM)ariton Wrote: [\[CITE\]](#) They are many tuts like this, but anyway, good work!
thanks bro i appreciate it.

fillobotto - August 16, 2010, 9:35 am

DNS concole says that i have a invalid username
O.O any help?

edit: succes

i turned off firewall, antivirus, and open port 82
when i run server windows says that server.exe has stopped working
???

edit2: :)

when i opened the server i saw the error message that i inserted when i create the server...but nothing appeared on the list of connection to the server of cybergate

chunky975 - August 16, 2010, 12:02 pm

Good tut, I got it working on my PC but my only question is about this bit:

(Jul 22, 2010 11:47 PM)kidcodii Wrote: [\[CITE\]](#) The next Tab is Connection. highlight the default DNS and Port then delete it and ADD a new one but put your I Pv4 Address:then port your using. if you

don't know what your IPv4 Address is you can go back to DNS Console and auto detect it or go to your start and type cmd, once this is open type ipconfig and it should be right there. it should look something like this 10.0.0.14 but i just put random numbers in there. In the boxes to the right put your user for identification and put the same password you used for your connection.

[img]http://i176.photobucket.com/albums/w165/zerorider343/Picture14.png[/img]

In Plutonium's tut it says only put your IPv4 address if you're only testing on yourself. What do i put if i want to do it to others?

king noob - August 16, 2010, 5:16 pm

Ok so i made the server how do i infect people and control there computer just give them server file and then it will pop up on Cybergate.

kidcodii - December 15, 2010, 4:29 pm

come on guys! lets keep this Tut alive!

kidcodii - January 22, 2013, 6:27 pm

This was back in the day! few years ago actually.

lololol
