Thread: [Addmefast iMacro Scripts \[WORKING\]](#)

Spyware - April 25, 2017, 9:13 am

Hey guys,

I went on a hunt today for a imacro script for Addmefast, I had used it before and wanted a few more points on my account to help boost up some some twitter posts and such. After searching for about 2 hours I finally found the scripts sitting on my external Hard Drive. I could not find them here, so I figured I would share them with you guys.

I have tested them and Netted myself about 10k points in about a hour or 2 of running it.

Things you will need

-To download the zip file -

http://www.mediafire.com/file/nz5d4d43wt4kg1i/AddmeFast_iMacro_Scripts.zip

-Firefox (I have not tested the Master loop in chrome it is a Java script file)

-iMacros 8.9.7 (<https://addons.mozilla.org/En-us/firefox/addon/imacros-for-firefox/versions/>) 9.0.3 has a strange issue and does not work right

Because I know some files on HF are Sketchy I ran a Virustotal on it, but please feel free to check it yourself

<https://www.virustotal.com/en/file/f7c92a4057794cd29ef6eff440a3ff9429dcbdb10ec1fd065d2654258a287c13/analysis/1493136637/>

If you have any questions about setting this up or what is the best way to build up points just ask and I will do my best to help.

Points as of 9:21am - 14891

Thanks for sharing. Works great in iMacros 8.9.7. ?

Yandere - April 26, 2017, 1:11 pm

Is AMF still active? I feel like the user base/ activeness has gone down the last few years.
