Thread: [Looking for a RAT that can remote control a ANDROID phone, like Teamviewer](#)

traderinc - April 26, 2017, 2:31 am

Hi guys,

I am looking for a RAT for android that can remote control and monitor the user screen activity, like TEAMVIEWER but undetected.

I have access to the device so install and permissions are not a problem.

Let me know if you guys can help me.

Thanks!

Hoodie+ - April 26, 2017, 2:58 am

Android OS doesn't support remote controlling.

An application cannot view the user screen, it's impossible because that's just how Android works.

Before you keep writing "what about Teamviewer?"

Teamviewer application on the Android app store doesn't allow you to control your phone, it just allows you to control your PC from your phone.

EDIT: Apparently there's an application called VMLite which does it without root, I personally don't believe it works but there's one way to find out.

I tried some VNC server app which advertises that it doesn't need root but it doesn't work without it...

Cool...

Wrong wrong wrong

Op Google spynote there is a free version on their website.

Lol, a android RAT with an VNC/HiddenTeamviewer option?

No m8, i'm sorry. Impossible. You want to spend big money to do it?

Search on Exploit.im for StonedCat and use that one. StonedCat got a HiddenVNC method.

Goodluck
