Thread: [Can't see wlan0 in autoscan setup \(Kali Linux\)](#)

Huzo - April 27, 2017, 10:13 am

Hi all ?

I was trying to install autoscan in Kali Linux but when I try to, I only see eth0 as network interface. Why is that? I can see wlan0 just fine when I type in iwconfig.

Thanks

Are you live booting, or running it in a VM?

If it is in a VM, make sure your connection is correctly configured.

In your case I'm going to guess that if you look at the top right of your screen you see a little ethernet symbol where the wifi picture is on my ubuntu machine

eth0 is your internet card, wlan0 is your wireless card

eth0 is your internet card, wlan0 is your wireless card

So, I have to turn off wired connection and connect to a wifi network instead?

Nevermind, solved it. Seemingly I had to connect to internet via WiFi too.
