Just woke up, saw your PM, and replied.

I will be slightly busy today, but once you provide the info as requested in PM I will issue your license ASAP.

Regards.

Orcus is a great R.A.T

If you're using it for Legal purposes.

?

I know it'll be biased coming from me but I genuinely think it's one of (if not the) best tools you can get.

Make sure you're using it for legal purposes otherwise your license will get banned. Try not to use words like rat, slave, spreading etc as that can lead to your license getting banned

It's a very good rat if you need advanced options on a single client, but in my opinion it's not so good if you plan to hold multiple ones.
