Thread: [Mass Emails Sending](#)

yoahsakoura - May 1, 2017, 3:31 pm

[b][b]Hello Everyone I searched here for a an Emailing thread but did found so i came with the idea of creating one can somebody help me please to send Bulk Emails , have more than 50M list and want to send email marketing i have got already the offers and everything but the Send isn't easy as i taught i had many tries with some ESP but everything goes to spam and i get banned every time (cuz they don't accept third party data) so i have the idea for setuping my own Dedicated server with a PTMA and Interspire but the problem is i do not have yet the Nulled version of PMTA and not enough money at the right moment so if someone know a trick how to send Bulk emails within a data which has 10% of bounce it will be great to help me it's been more than 8 months that im searching but found NOTHING interesting especially those who try to sell me Inbox to all with on skype ... please HELP ! I need informations ! [/b][b]

If you have a list of 50M people on it I doubt that they are legit emails.

yoahsakoura - May 1, 2017, 4:28 pm

It's a half purchased data yeah it's not a full double opt-in but as far as i know legal data and my letter has the unsub link Legit or not it's not what im looking for can you help me ? btw thanks for replying

Vayxa - May 1, 2017, 6:33 pm

Maybe you can try using php my friend. But i told you sending massive spam is illegal. You might be get busted by cops. Just be careful and think twice.

yoahsakoura - May 2, 2017, 6:21 am

Thank you Vaxaya For the reply but can you tell me more about PHP ? i got many scripit and uplaod them into a host that can send but most of my email goes to spam.... so i don't know how can i link the PHP mailer with a Dedicated IP

Asdethprime - May 3, 2017, 2:04 am

SET (Social Engineering Toolkit) is a free software [if you are using Kali Linux it comes pre-installed] which you can use to send mass emails.

All you really need to do is download SET and then run it. Choose Social Engineering Attack (option 1), then choose mass mailer attack (option 5) and you can continue along with the instruction the software gives you.
