Thread: [Full stack web dev](#)

ubersoldier - May 2, 2017, 9:46 am

Keeping it short, check my signature to see what I do.

I am looking to expand my range of products, I need web devs with extensive knowledge on SaaS and multiple server side languages.

Paying well with long term opportunity and possible profit shares.

respond with a list of languages that you know (both front/back-end)
also, include a list of projects/portfolio and tools that you build.

Any frameworks should be included aswell.

fail, try again, repeat till flawless :)

theogg - May 3, 2017, 1:49 pm

Why don't you start with what you require skill wise followed by what you're will to pay.

I could sit here for hours listing out the frameworks I've used and continue to use.

Plus, you're best bet if you want cheap developers is to higher a bunch of Indians.

ubersoldier - May 3, 2017, 2:32 pm

been there, done that. Indians generally don't live up to quality standards and communicative skills are not really to die for :P.

I'm looking for webapp frameworks that support SaaS, mostly PHP I guess

SaaS is just a model so any language "supports it" its up to the developer to implement the model, and the business to support it.

I'm from the Microsoft stack so I can't help you with PHP as I haven't been near it in a while.

Granted some of the Indians code quality (the cheap ones) aren't the best, and communication skills can be strained too, but with the correct management you can get a good solution pretty cheap. So, maybe what you should be looking for is a good project manager.

There are plenty of languages simply not build for SaaS, they are either too slow or will bottleneck under load. I'm not sure why you are saying "all you need is a good project manager". I have managed dozens of teams on hundreds of projects. Indians are far harder than any other I have worked with. Hence I'd rather pay a bit more and get better quality in return

Mr. Zachary - May 4, 2017, 4:27 am

If you ever need a front end dev to layout or style your websites, just hmu buddy :)

theogg - May 4, 2017, 10:26 am

Such as, but not limited to?

It was only a suggestion mate, but I've worked with them myself in the past, and they can produce some good stuff if managed correctly just the same as good developers will produce shit under bad direction.

I appreciate the suggestion, don't get me wrong :D.

Not quite my experience though, a decent developer imho is a guy that can take in a project managed by someone incapable and still make the outcome "workable". The art of managing is

being sure you don't have to manage allot. Indian guys so far require an extensive amount of micromanagement. I want you to build xyz, I really don't care if you use 1/2/3 tab intends as long as you stick to guidelines. ??

Knar. - May 5, 2017, 11:07 am

Feel free to shoot me a PM or add me on Skype (knarleyhf). Thanks.

If you can't comply with my request that says enough about your willingness, read the post.

Lone - May 8, 2017, 6:16 pm

Currently a web dev student so I'm not sure how much experience you are looking for.

Skills: HTML, CSS + frameworks, Javascript + frameworks, Node / Express / PostgreSQL, and am currently on my first day of learning Angular.

Pretty basic projects but;

BF1 Stat Resolver: <http://heinous.xyz/bf1.html>

Funny Video Site: <http://heinous.tv/>

SIM-1847363 - May 8, 2017, 6:19 pm

I am a full stack developer.

VB, C#, Java, PHP, HTML, JS, C, CSS, MYSQL, GDI+. PM for discord, I don't use skype.

(May 8, 2017 06:27 PM)Yani Wrote: [\[CITE\]](#) ldk but coders aren't cattle.

I'm looking for those that actually read project description in detail and can comply with that. It has nothing to do with being cattle, it has to do with being fully focussed and being able to fully understand what is being asked.

iExploits - May 9, 2017, 4:00 pm

Your original post is absolutely shitty and unclear. If you want people to PM you instead of posting here, clearly state it then. Learn to ask clearly. Learn to use proper grammar as well.

ubersoldier - May 9, 2017, 4:29 pm

(May 9, 2017 04:03 PM)Yani Wrote: [\[CITE\]](#) I think this guy first has to learn some manners before getting coders to work FOR him. I said "for him" because he clearly doesn't want to work together with someone.

Thanks for your comments guys. Ask my team members how I treat them ?. My English isn't native, sure go bash... There actually is an educated reason for my original post, I tend to hire those that read and fully understood and acted upon my requests, those are the guys that tend to be self-sustaining. Hence great hires if you are looking for coders.

Please go ahead and post a bit more about your feelings towards me, I'm not really impressed.

ubersoldier - May 9, 2017, 4:43 pm

(May 9, 2017 04:36 PM)Yani Wrote: [\[CITE\]](#) Ah, I'll go ahead and do so. You're not a coder yourself, so your educated reason even stands above your own education. You are posting on a forum, and if you post a thread and use the word "respond", that actually means to reply to the thread.

So if you can't even understand your own words and requests, why do you feel better than the people that actually do?

Read again bro, it's not about the pm It's about getting back with a list.

Also if you read my references you'd know I'm a coder :).

wrong, wrong and wrong again. Thanks for keeping in touch though ?

See what I was talking about in regards to good management? If you can't even communicate with developers without pissing them off how do you suppose you'll be able to relay your bussiness requirements, ensure the developer is developing against your user stories, track progress and ensure proper testing of your solution?

ubersoldier - May 10, 2017, 1:57 pm

The fact I run a 7 figure company and have 8 full time dev's employed suggest otherwise. Thanks bye.
