Thread: [\[TUT\] **THIRD PART** Back Orifice 2000 Tutorial\(Additional Tasks\) \[TUT\]](#)

LEGEND_XEON - July 23, 2010, 8:32 am

Part 3

This thread comes in continuation with these threads:-

Part1= <https://hackforums.net/showthread.php?tid=561358>

Part2= <https://hackforums.net/showthread.php?tid=561364>

Its the last part of my Back Orifice Thread.

Using Back Orifice you can also browse his files and registry.

For this first click on the the Icon as shown in figure. Then go to BO Tools > Filesystem Browser.

[img]http://i863.photobucket.com/albums/ab192/star_speed/15botool.jpg[img]

After that a window will popup asking you the remote victims address. Enter it and click ok.

[img]http://i863.photobucket.com/albums/ab192/star_speed/16botool.jpg[img]

There it is. Now a window will popup. There you enter the drive C:/ , D:/ or whatever to see his files.

[img]http://i863.photobucket.com/albums/ab192/star_speed/17botool.jpg[img]

That's it. ?

The other things that you can do with the victim is that you can keylog him, view snapshots, download files, upload files, view his processes, edit his registry etc. (same features as in RAT).

The coolest thing about it is that it can use AES encryption to securely connect to your server.

Note:- (a) I made this TUT myself by reading bo2k documentation and trying it on my virtual machine. And it works perfect.

(b) You can get full souce code and documentation of Back-Orifice with video tuts at <http://www.bo2k.com>

I hope that you like it. ?

Please comment on my thread. ? ?

Do you have to have a static IP to use this? Because mine is Dynamic):

Maasie - July 23, 2010, 11:31 am

Good tutorial! But Ill stick to CyberGate for now ;)!

Nope not necessary. You can set no-ip host address in case you have dynamic ip.

(Jul 23, 2010 11:31 AM)Maasie Wrote: [\[CITE\]](#) Good tutorial! But Ill stick to CyberGate for now ;)! Thanks mate. No problem. I know that Cybergate RAT provides equivalent features as that of backdoor. ?

Mundial - July 23, 2010, 1:11 pm

Is that the same case with a RAT too?

LEGEND_XEON - July 23, 2010, 1:32 pm

(Jul 23, 2010 01:11 PM)onkaloonka Wrote: [\[CITE\]](#) Is that the same case with a RAT too?

Yeah. But i recommend you to first start with RAT since there are some hassles to tackle with this backdoor. ?

Mundial - July 23, 2010, 1:39 pm

Okay, thank you for the help, someone misinformed me by telling me you ip had to be static in order to operate a RAT. Thank you.

No Problem. You're welcome. ?

antrandom - September 30, 2010, 6:54 am

very helpful thanks a lot

AI_Fortress - October 23, 2010, 7:26 am

It's looking simple and easy not too scary like the newer rats. I think I like it for my first attempt ? , but it's old(2007) and do you have any suggestions about how to make it to run on my target PC under the nose of avast! antivirus.

And another thing I am unable to get my paws on the encryption plugins, all links to them are dead as far as I can tell ?

s.seezy19 - October 23, 2010, 7:41 am

I like this software. Thanks a lof for it guys

LEGEND_XEON - October 26, 2010, 7:10 am

Thanks for such nice comments. I am glad to hear it.

Italy - October 26, 2010, 7:20 am

Nice guide, thanks for writing , but Bo2k is old and outdated for hacking , btw it is still good for remote server control :)
