Thread: [Tutorial how to build file binder](#)

PhantomCod3R - May 4, 2017, 2:59 pm

hey guys

im looking for tutorial how to build file binder

Thanks !

Xamarin - May 4, 2017, 3:17 pm

Why do you even need a tutorial for this ? You just bind the desired files inside the "target" file and you open them at run-time. Nothing hard about it.

Tip: If you don't know... there is a compiler from microsoft called codedom which you can use to compile code yourself. That way you can create the "stub" if you want. Or you can compile the "stub" and then put the files at resources through mono.cecil or dnlib.

This title is very misleading...

NyQuil - May 5, 2017, 4:51 pm

so is his signature lol anyways...

<http://vb-pr0g.blogspot.com/2012/10/joiner-public-class-form1-dim-f-f2-as.html>

notice the anti-leech extra in the second (stub), this of course isnt codedom but can still be generated from codedom and random.
