Thread: [Best RAT with mining capabilities?](#)

CleverUSB - May 5, 2017, 3:22 am

Hello Hack Forums,

I'm new to the world of RATs and I want to play around with one. Does anyone know a preferably free RAT that has cryptocurrency mining capabilities? It would also be nice if I can't be detected by AV and etc.

?,

In terms of "best" cryptocurrency I can't help you since I don't use them but what ever it is 99% of the time your going to need to purchase a crypter so AV doesn't detect it.

A free RAT is almost never FUD.

I recommend to use the RAT only to execute a standalone silent miner, they most of the times are better then the ones in a RAT. You can buy silent miners here on HF.

As a free RAT I recommend Quasar.

3azraiell - May 5, 2017, 4:45 am

no ther are no free RAT has cryptocurrency mining capabilities

you can check Revenge RAT and code your plugin for the silent mining if you know how to code there is a tutorial how to make a plugin for that RAT
