That scan is not accurate.

I am posting this JUST to make you aware.

Currently the only scanner that is working properly is viruscheckmate.

Netwire is the RAT we do all of our testing on. So 100% netwire works.

Is your crypter compatible with # and how often do you ReFUd and does your crypter has inbuilt scanner or we need to scan by ourselves

I saw this thread about you <https://hackforums.net/showthread.php?tid=5626269>

How can we trust your words on this crypter buddy

It is compatible with #, it does not have an inbuilt scanner.

I refud as soon as I see that it is detected.

And I have no comment over that thread.
