Thread: [How to merge two .exe files](#)

systx - May 9, 2017, 8:32 pm

How might you merge two .exe files, one being a virus the other not, so that the virus runs first then the actual program or vice versa?

captainspalding - May 9, 2017, 9:17 pm

Are you sure this question is worded correctly?

As it is written you have two exes, both with viruses.

HFDone - May 10, 2017, 3:30 am

store the files as bytes in your program
drop them to temp dir and run them

Thanks for pointing that out, fixed.

I'm pretty sure there is a copy function or something for that. I am currently a novice In python so I don't know very much. Maybe try googling it?

?GC? - May 11, 2017, 11:26 am

You're asking for some sort of binder? Not really sure this is a Python question. If it is, I'm not sure why you'd want to write this kind of binder in Python. There are plenty of free binders all over the internet already. If you're just looking to use one, I'd download one and use it. If you're serious about creating one in python, perhaps de-compile one written in VB NET and take examples of structure and technique, then begin writing your own in Python. Good luck with this project :)
