Thread: [Need help with autofill webform](#)

Dotexe - May 13, 2017, 9:45 am

Hello lads, i want to help one friend with [this](#) , its some kind of donation. But i want to create simple program where i can autofill and send automatically with timer instead of doing it manually, but i stucked here

Code `webBrowser1.Document.GetElementById("submit").InvokeMember("Click");` basically username/email and message box are working but only the button called "Click to tip" gives Object reference not set to an instance of an object, where is the problem ?

dzvtfuqqe - May 13, 2017, 11:18 am

1. usually submit is used more than once and not as a global object so I suggest you look into XPath's

I can't post links but I can remove the resource identifiers ;)
`w3schools DOT com/xml/xpath_syntax DOT asp`

2. WebRequests! Look into them!

I could just as easily give you the neccessary code but you know the old saying.. Give a man a snippet of code and he'll compile for a day. Teach a man a snippet of code and he'll be able to debug and compile always.

I can help you on Skype if you add me@live:wamfyssz

I did not neccessarily mean figure it out on your own, but I can help you on Skype if you want.
