Dont use DarkComet. DC is vulnerable to exploits. If you want native RAT, use Netwire. Netwire is stable, fast and capable of holding thousands of bots.

It's a great RAT indeed, I wouldn't recommend it for malicious use though.

Don't use DC AT ALL, it can be exploited.

Like all the above don't use DC its exploitable.

Use njRAT, Revenge-RAT or Quasar.

Or even better just use the search feature or look in this section for more than 20 seconds because it is listed everywhere.
