Thread: [How do I create a class library from a theme?](#)

passwords - May 14, 2017, 6:16 am

So I have this theme that I want to make into a dll and reference in my C# project but everytime I add the code to a class library I get like 500 errors.

Any ideas?

Why did you post this thread when we already gave you the solution? You'll not get different answers on this thread...

Posted here because it seemes more like a VB question. I wanted an answer to why I was getting the errors and I didnt get the solution on the other one because I didnt get it to work.
