Thread: [Recon Theme Converted From VB > C#](#)

passwords - May 14, 2017, 8:34 am

Hello everyone!

So I found this cool theme on Hackforums made by the user UnReLaTeD.

he's account is unfortunately closed but I will be leaving the link to he's thread at the bottom.

Anyways I found this cool theme of his which I think is based off of aeons.

I couldn't find a C# version of it so I took the time to convert the code into C#.

All you need to do is to create a new class in your project and copy paste the code in there, build the project and you're done.

Enjoy! ?

what the heck is this crap?

Ninja - May 14, 2017, 10:29 am

Why didn't you just create a library like we told you a million times?

You are the true cancer of this forums.

Keyword: me.

So why bother posting? Just to piss people off? You have nothing in your pathetic life that you feel like you should piss off people that attempted to help you?

Narwin - May 15, 2017, 11:37 am

did you used converters to doing this conversion ? cause I see a lot of "this." in it like "this.ForeColor" it's really pain to see these type of coding.

Exactly my thought.

OP Why the fuck did you even post this?

darkdoctor - May 16, 2017, 6:23 am

Looks nice :)

Thanks for themes.

..... :)
