Thread: [\[help\] Need Help Removing Write Protection From Pen Drive](#)

Xerecrome - May 14, 2017, 9:07 am

Hey guy,

I am currently having this issue with a pendrive and was wondering if any of you could help me. Now i know that there have been some topics regarding this issue previously as well as i have read that previous threads as well but unfortunately none of it worked but i really wanna make this work so can you guys please help me with this.

Im having a Kingston 32gb pendrive (dont know how that gonna helps but gonna add it just in case) which is apparently write protected (i dont know how it happened) i have already tried scanning for virus with with multiple anti viruses (namely kaspersky, macafee, escan and etc..) i also have tried with regedit (HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\StorageDevicePolicies) and cmd (attributes disk clear readonly) and to make things worse when i tried formating it went halfway and failed cuz write protected so as u may have guessed now its stuck in raw format....so can u guys please help me.

P.S: sorry for that unnecessarily long msg and also for my bad english ?

Hi

Did you tried with diskpart command line ?

[/align]

yes i have, but sadly it didn't work

mantas105 - October 10, 2017, 8:36 am

i have same problem with this

5chn4pp - October 10, 2017, 9:47 am

This is typically just a usb drive that doesn't work anymore, happened to me also.

Just buy a new one and throw the old one out, it cant be fixed as far as I know.
