NyxIRC

About:

Nyx is an IRC client coded from scratch completely in C++ meaning it has 0 dependency on any frameworks. Clients will join your channel and have names containing OS version and location (Nyx[10][US][CrUNgVpU]).

Upon first starting, it will check its current location and installs itself to whichever location you picked. It will then install this location to registry, and will monitor that regkey.

It will also attempt to inject into other processes to monitor itself. This makes it very difficult to kill or remove.

Clients can be given commands based on .NET version, so if you want to install a .NET executable only on compatible machines, this is easily accomplished.

Nyx is also in active development, meaning that as features get added and the client becomes more sophisticated, price will rise while early adopters get the same product for much cheaper.

Features:

Multi-process injection

Process persistence

Add to startup

Registry persistence

File melt

Detect .NET version

Execute commands on clients with specific .NET version

Chrome & Firefox password recovery

Anti VM/Debugger

DL/Exec/Update

Coming Soon™:

Malware remover

UAC Bypass

IE/FTP/IM/Etc recovery

Visit website

Cryptonight miner

Pricing:

\$75 - Build + server setup

\$50 - Build

\$15 - Rebuild/update

Notes:

Payment must be made in Bitcoin, Ethereum, or Monero. PP will only be accepted for exceedingly high rep/trusted users. Other crypto-coins can be discussed.

.NET targeting is accomplished by using command .net 2.0 .download <args> (2.0 can be replaced

with whatever version you want)

Melt/Injection/Installation can all be disabled if you would rather use the options from a crypter
Server setup does not include hosting, you will provide host, i will login one time to setup your IRC server & channel. No further support is provided. If something goes wrong or breaks, I am not responsible.

Vouch copies will be provided to trusted reviewers only

If you own the bot, and a feature you suggest is accepted and implemented, you will receive the update free of charge.

ToS:

All sales are final. There are no refunds under any circumstances.

I am not responsible for your actions and things you do with this software.

You are not permitted to share or leak this software.

I reserve the right to change price and terms at any time.

Purchasing:

To purchase either PM me or Contact me on XMPP: ShadowOp@exploit.im or 778183@hackforums.im

I only encountered 2 errors with the bot and he already fixed one within an hour of sending him a PM. We are still trying to reproduce the second one.

It's an IRC loader so the point is to hold these bots not to DDoS, Mine cryptocurrency, etc..

Crypts wonderfully with native crypters. I would like to see a builder for this. Vouch for this IRC bot. Prolly best IRC bot on HF Period.

Longdog - May 15, 2017, 4:53 pm

Do you have features like download / updates files onto bots? Any other spooky nonhf allowed options that make things disappear ;)

Just wondering as IRC protocol is usually used for that.

?ShadowOp - May 15, 2017, 4:58 pm

Just wondering as IRC protocol is usually used for that. Yes to the first, you can download and execute, just download, or update onto the clients. This first version was focused primarily on stability and survivability. I cannot say for sure what will or won't be in future updates.

It seems like a nice tool. If I could get a test copy then I would vouch.

jebb - May 15, 2017, 8:16 pm

wow people still use irc bots in 2017?

?ShadowOp - May 15, 2017, 8:46 pm

VSBG - May 16, 2017, 7:31 am

Can u show some video/img about you Loader ?

?ShadowOp - May 16, 2017, 11:14 am

(May 16, 2017 07:31 AM)FitbitNTT Wrote: [\[CITE\]](#) Can u show some video/img about you Loader ? What would you like to see? There is no control panel or web panel, it is simple text commands through IRC.

Goldmouth - May 16, 2017, 11:38 am

Very nice, Last IRC bot sold here was C# Garbage. GLWS throw a copy my way.

Zettabit - May 18, 2017, 10:22 pm

What makes this better than any other bot on the market? I'm just curious as to why you slapped a \$75 price tag on what appears to be a pretty basic IRC bot, just because it's native.

?ShadowOp - May 19, 2017, 12:11 am

Hi, 75\$ is for the bin and setting up the IRC server. The price for just a build is \$50.

I believe it to be worth this much, if not more, for a few reasons. The first being like you said, it is completely native.

Currently most, if not all, controllers sold here require .NET or Java in some form, which can be very limiting depending on your usecase.

Then there is the .Net command, which is very unique and lets you target your clients that not only have .Net installed, but can be targeted to a specific version of .Net. This is only the begin of the command-targeting. I plan to expand on this feature in the very near future and allow many more filters to be set, such as location, hardware, etc, as well as limiting to a certain amount of executions.

There is also the persistence method used, it is very resilient to crashes or unplanned client terminations, and is able to restart itself after almost any termination.

Finally, the fact that it is still in active development means that it will not get outdated for awhile. Rebuilds are only \$15, so ensuring you have the latest and greatest features is very cheap.

This also seems to be the only client controllable via IRC right now, meaning there is no complicated web-panel and database setup necessary, no port-forwarding and no dynamic url routing required. IRC takes ~15m to download and setup, and it only has to be done once.

There are currently a few members with review builds of the client, I am sure they will agree that the price tag is well worth it.
