Thread: [Free Global Website Accessibility Tool - Feedback Requested](#)

Babur - May 17, 2017, 8:11 pm

Hello Everyone,

We have recently launched a global website accessibility tool. Here are some of the features available right now:

Checks any URL from 20 locations globally.

Provides loadtime/uptime status.

Provides a screenshot

Here's the URL: <https://heartbeats.io>

It's a free tool.

Here are the features in development:

API

Adding 25 more regions

Fixing the ugly map.

Adding pointers on the map

Provide actual browser load time.

Making it faster.

Adding ReCaptcha before tests

Ability to provide report in all timezones

Here are the features currently in the pipeline:Downtime notifier

IP Ping

I would appreciate your feedback, comments, suggestions and feature requests.

Cheers!

This is the PHP section where people should be asking for help and such.

This thread belongs in the website showcase section: [Website Showcase and Reviews](#)

Just a quick suggestion (I don't mean to be picky by the way) but under the 'How much does it cost?' it should be "it's free and always will be."

Instead of 'It's free and always would be' ?

Thanks! :)

Have made the change.
