Thread: [Download Server Sided Scripts and Files with wget](#)

ValveVacBanned - May 18, 2017, 5:17 pm

Download Link

aHR0cDovL3d3dzU3LnppcHB5c2hhcmUuY29tL3YvT3ljTW5yb3cvZmlsZS5odG1s

Virus Scan Link:

<https://virustotal.com/en/file/52e6634a948cf0168df30fde9083a8e5c1eb2b1f07aa5c010f27c0b6e5835250/analysis/1495153347/>

Links encoded in Base64 to prevent leechers

First have it downloaded, Then you want to make a folder on you desktop named wget.
When the folder is created put the .exe you downloaded from the link above in there, then open CMD (WIN+R, type "cmd" without quotes).
When you have CMD open type cd C:\Users\YOUR-USERNAME-HERE\Desktop\wget
from there type wget -r -a.html www(dot)example(dot)com
it will start to download to the folder on your desktop, when its done loo through the files or delete them cause why the fuck not?

share, rep, whatever, i dont care about that.

saliva - May 18, 2017, 5:18 pm

This is a scam.

curl/wget/whatever tool you want to use won't work, because they work on web requests. Whatever perms you have, wget will have. You can't download server-side or specifically-chmodded files like that.

Charger - May 18, 2017, 5:23 pm

Clean scan:

<https://virustotal.com/en/file/52e6634a948cf0168df30fde9083a8e5c1eb2b1f07aa5c010f27c0b6e5835250/analysis/1495153347/>

But why not use the official wget?

<http://gnuwin32.sourceforge.net/packages/wget.htm>

Please do not comment unless you have tested it yourself, further actions like this will lead to me completely ignoring you and blacklisting you from all future tools.

But why not use the official wget?

gnuwin32(dot)sourceforge(dot)net/packages/wget(dot)htm

"But why not use the official wget?" didnt feel like downloading it and i already had it.

@salvia Hope this is enough proof for you.

Beladonis - May 18, 2017, 7:06 pm

It won't download server-sided scripts (php/asp/etc) but html files. Don't even need to try, that's simply not possible.

saliva - May 18, 2017, 7:36 pm

Look at that, no server-sided files or scripts!

ValveVacBanned - May 19, 2017, 8:32 am

(May 18, 2017 07:36 PM)saliva Wrote: [\[CITE\]](#) Look at that, no server-sided files or scripts! again, have you tested my method? if not, dont claim its a scam or bullshit.

plskthx

plskthx

first test, then comment.

It's not possible to download server files, period. Check your screenshot, there are no server files but front-end js/css/html/font files.

Ohhh spooky.

Listen bud, it's just not possible to download server executed scripts such as PHP files.

Beladonis - May 19, 2017, 10:53 am

BLACKLISTED AND IGNORED

There's clearly something wrong with you....

<http://stackoverflow.com/questions/7938624/is-it-possible-to-download-php-script-from-a-web-page-with-wget>

Lets just take a quick look at your tutorial too.

(May 18, 2017 05:17 PM)ValveVacBanned Wrote: [\[CITE\]](#) wget -r -a.html www(dot)example(dot)com
Weird. I followed those instructions and I got this.

Guess you're wrong just like everyone said Imfao

nothing wrong with the tut, i see custom icons, what else is custom?

also wget requests may be blocked for that site. specially considering its your site. you could of temporarily denied any requests from your own IP and did it.

EDIT: cloudflare

EDIT: cloudflare

You clearly don't understand how file permissions work on a web server.
