Confirmed CS developers read HackForums.

New operations were just brought up in "why is the CS section so dead?"

Welp since the update today I can't join any community servers, it says "auto disconnecting in XX:XX"

Also on valve DM servers I have super high ping now out of no where and everyone is all laggy where I can't hit anyone. Never happened to me before but I don't think it's on my end.

Probably just high load in your area, I'd assume.

This new op was released last night, the night after I had 2 hours of sleep. I slept through the entire night to morning, left my mouse at home now I'm at college without a mouse and a lot of rest. Oh.. and with about 4-5 hour break between classes with no ride. FML... track pad grinding here we go...

on a gt903m laptop.

edit: nvm about the mouse. A mate in my IT coarse is bringin' an extra for me. Aha!
