This link [h ttp://yantoy94.fileave.com/23.exe](http://yantoy94.fileave.com/23.exe) is still in the Slide.jar file !!

It doesn't make no difference if you just change the link in SlideShow.java !!

What you guys actually need to do is :

1. Enter the link to your server.exe in SlideShow.java
2. Download [Java Drive by BAT](#) and run it to compile your Slide.jar.
3. Upload these [Pictures](#) and leave them all in a seperate folder.
4. If you open the Index.html you will see a list of these pics in there but NO pictures were in the download ???
5. Have fun !

If you want to open and check your Slide.jar, open it with WinRar and click on View File ! Then its just the matter of looking for the link to your server.exe.

Hope This Helps ?
