Thread: [\[PRICES RELEASED\] Intel Skylake X Core i9 CPU Lineup](#)

Mark Zuckerberg - May 29, 2017, 1:46 pm

<http://wccftech.com/intel-kaby-lake-x-skylake-x-pricing-leaked-core-i9-7920x-7900x-7820x-7800k-i7-7740k-i5-7640k>

Mycroft Holmes - May 29, 2017, 1:48 pm

The prices look pretty reasonable for what they offer.
However, I doubt the average PC gaming consumer would buy them.

They will probably be preferred by people who are rendering a lot or performing CPU-intensive tasks in general.

You Just Got Sarged - May 29, 2017, 3:19 pm

Looks high priced just like I thought it would be.

unknown2me - May 29, 2017, 3:35 pm

The prices were leaked from in thailand. The prices other than Thai Bhat should be taken with a pinch of salt.

I highly doubt the 7800X will be £344 in the UK, closer to £500-£600 more like.

Bengali - May 29, 2017, 3:49 pm

Should I get a 6-core Skylake-X or a 6-core Coffeelake? Or go with threadripper?

Malevolent - May 29, 2017, 3:52 pm

Wow AMD is still going to lead them rather strongly.

Oh Intel...

shreder - May 30, 2017, 8:23 am

Ugh cant they lower the top chips by \$400?

Raptor. - May 30, 2017, 8:27 am

Fuck there's also a huge power draw coming from these things - TDP on a 7700k is 91w.

shreder - May 30, 2017, 8:28 am

Will the 7800x&\$7820x viable for gaming?

Breeze26509 - May 30, 2017, 12:30 pm

TDP $\neq$ power draw

(May 30, 2017 08:28 AM)shreder Wrote: [\[CITE\]](#) Will the 7800x&\$7820x viable for gaming?
It'll probably be just like the 6850k/6800k.

Spoiler [\(Click to View\)](#)

I'm a little confused as to why everything (officially) supports DDR4-2666, while the 7800x supports only DDR4-2400.

It's technically a measure of heat output, but it has a direct relationship with power consumption.

2077 - May 31, 2017, 8:20 am

probably going to buy the 7800x since the new MSI motherboards look so good lmao
