If you're implying I did this, I can insure you I'll never scoop that low.

Especially since my net is monitored by the feds, would be a very stupid thing on my part.

Huge vouch for this VPN is very fast and easy to use.

Speed: 10/10 - Had no problems with this at any time. The only thing that could be annoying is google makes you do captchas sometimes, but nothing too gamebreaking. The servers are fast and reliable and more will be added soon hopefully.

Usage: 10/10 - Extremely easy to use and setup, all you need is the client or the configs to connect to a server.

Servers: 7/10 - I give this a TEMPERARY 7/10 because there are only 3 servers, but more will be added soon. Once atleast 2 more is added I would give it a 9/10.

Support: 10/10 - Thermal is great with support and helps whenever you have a question or concern.

Overall this is a really good vpn service for the price and performance. I would suggest this for no matter what you need it for and it also can portforward which is a great feature. Overall: Simple setup, portforwarding, good servers, and wonderful support.

On the site, you should add all the servers you have and I with the plans it says access to 10+ server locations ...

We did, although someone decided to grace us with downloading certain images/copyrighted material on them to deliberately get them shutdown.

I mean, that's kind of the point of using a VPN?

Pretty sketchy host if they shut you down that easily.
