Turn Your Device Into a Hacking Device

Linux is considered the best operating system for Ethical Hacking and Penetration Testing. As android is a linux based operating system so there are various hacking apps for android. So we are sharing a list of 15 android tricks which will turn your android smartphone into a portable hacking device.

Make sure your android device is rooted before you do these hacks

1. Kali Nethunter probably is the best

I will be making how to install Kali Nethunter on any android devices.

2. Install Linux Terminal like Termux or Terminal Emulator whatever you choose.

3. Turn your android phone into a Working Web Server

4. Install pentest tools like Zanti or Csploit/Dsploit etc.

5. Install apk modifier like APK editor or APKInspector etc.

6. Install programming tools like AIDE or Droidscript etc.

7. Bugtroid (PRO) is an innovative tool developed by the team of Bugtraq-Team.

The main features of this apk, is that it has more than 200 Android and Linux tools (PRO) for pentesting and forensics through its Smartphone or tablet.

8. Hack anonymously

Install VPN, TOR, etc. to hack anonymously

9. DroidSQLi is for hacking websites to grab information

10. Learn android development

I will be making android development later on

Not bad, Thx for tips, I'll try. :)

Enchantress - June 2, 2017, 6:58 am

Very nice write up guide. Android is definitely a great mobile pentesting platform. I haven't heard of bugtroid before I'm going to check it out. I've been wanting to learn Linux more in depth for a while now and pentesting so I guess I'll start with android. Thanks for sharing this.

Do you know if its possible to install 2 ROMS on the same phone? For example when I boot the phone select which ROM I want to boot. Is it possible?

Thanks!
