Thread: [FUD crypter for njrat](#)

Potter007 - June 2, 2017, 1:13 pm

Hey all,

I am new here and am looking for a FUD crypter for a rat.

I have tried a few with no luck

Infinity Crypter is FUD but makes it so the rat does not execute by windows and cannot run

i've tried others like

JanaDark, jCrypt, MLV Crypter, Cryptech, Crypter v3.

either they are not FUD or break the Stub during encryption.

I am fine paying as I know thats the only way Ill get a legit one. If someone can help with a one time encrypt or point me to a software that would be great.

* I have a specific target in mind that runs windows 10.

Cheers,

You should look for a private crypt in the encryption market. Plenty of people doing it.

Potter007 - June 2, 2017, 2:19 pm

Update, Just went to market place, paid \$35 for Shield Crypter and it does not work. found by 26/61 scans. if you're looking into getting it be cautious

Dataprotector. Best crypter on the market place IMO. Sorry to hear you bought a bad one OP.
