Thread: [GreaseMonkey or TamperMonkey?](#)

Tron40 - June 5, 2017, 12:58 pm

I'm interested in saving a session after it expires. The session is in Chrome. I've heard that if I get the cookies of a session (I've done that already using Wireshark), then I can use Greasemonkey to then use the cookies I have to reopen the session again. But since Chrome is currently my favorite browser (I don't even have Firefox anymore), can Tampermonkey do the same thing? If so, is there anything else I'd need to do what I'm trying to do?

Theyre literally the same thing.

Also dumb dumb you can get cookies in all kinds of ways its very well known and insainly easy to find. Any skid like you or anyone else in the world could find one.

Also your pretty dumb to be asking if TamperMonkey can do the same. I am surprised you've heard of it yet havent bothered to google what it does and what it is used for.
