Just tried logging into play some LoL and I'm get this stupid error.

The EUW servers are up which is what I play on. But I still can't log in?

Anyone know how to fix this.

thankyou

I had the same problem 3 days before.

I just deleted all LoL files and I download it from the scratch.

There's a buttons somewhere to repair the client though i've noticed the new one typically repairs itself. You could try the "hextech repair tool" it's a big download but usually helps.

I just literally shut LoL and re-opened it and it fixed it lol. I asked for help before I'd even tried anything. I'm stupid
