That's true. I will reupload it on another server. It seems that mediafire doesn't like such tools.

Edit: I uploaded it on mega.nz

lydiaa - June 22, 2017, 1:42 pm

sky3212 - June 23, 2017, 3:58 am

does not work....

i tried with my account but it didn't do anything...

Meow - June 23, 2017, 4:02 am

Going to test if it works but I'm sure it's better than 90% of other turbos on the market, very generous of you to release it for free. ?

Once you first input your credentials in it, Instagram will not accept it because it will find it suspicious. Go to Instagram on your browser and you will get a message asking to verify whether this was you or not. Verify it was you and it will start working.

Sure, test it. I tested it on my own Instagram and it worked. I am not that much into selling OGs so I did not use that tool extensively. I hope that some people can find it useful though.

lydiaa - June 23, 2017, 11:27 am

This flagged up on both AVG and Malwarebytes. I'll not take my chances, thanks anyway?

James Burnham - June 23, 2017, 11:38 am

Use it on a VPS. Amazon and Google have free VPS.

Brutediamond - June 23, 2017, 5:29 pm

Very nice share i will use this tool

Young Sosa - June 24, 2017, 4:09 am

Really nice tool, why you're givin' It out for free? It would be good to be a paid software.

Because I am trying to give something back to HF. I don't have time to write tutorials or to code tools myself so I did that. After all these years I have been helped tremendously from people that took their time to write tutorials or code software. It's only fair if I give something back.

chilzonia - June 24, 2017, 5:55 am

So what is this actually used for? any good reasons to use this?

I run this on a free Amazon VPS. Probably the detection rate is false positives. I am no antimalware expert, but I trust that Lads gave me a clean software. Still though use it on a VPS because you will have to have it running for a long time.

Kylies - August 9, 2017, 9:10 pm
