Thread: [TheBombCSGO \[League Cheat\] \[50 Slots\] \[Never Detected\] \[Strongest Legit Cheat\]](#)

Cali - June 8, 2017, 10:20 am

TheBomb is a strong legit-based cheat, it has been around for over a year with no detections. Throughout the year there has been great memories and many leagues taken over. Due to a recent accident the cheat was put into a private state with no one able to purchase the cheat, other than those who already had it. But because things have been going well I have decided it's time to bring out the cheat for more people to purchase - so the slots have been boosted up and more league support is coming weekly. I look forward to seeing many new customers.

Quote:Deeper Details:

Cheat is internal, to everyone who keeps asking.

The cheat consists of a loader that will check if your HWID is whitelisted, if not you will be provided with one that you will give to me to be whitelisted after payment.

Once HWID is verified, modules will be streamed from the server, and the kernel helper will be loaded.

The kernel helper will manage everything, will detect if CSGO is running and "inject" the cheat.
