Thread: [extract password from a window HDD](#)

oliver939 - June 8, 2017, 2:17 pm

Hi,

I have an hard-drive from a PC running windows (7 I think) and I would like to extract passwords, from windows first but also in particular from visited website (if available in cache).

I tried recall.exe but couldnt get anything.

Also, how to access data from the User folder? (and possibly access outlook messages).

Thanks

Have you booted up the OS and checked web credentials?

EncryptedRegView could maybe help also.

oliver939 - June 9, 2017, 11:19 am

No, to boot the OS, I would need the PC.

I could try to boot it using a machine I have but would have to work on the drivers and then, I'll be stuck at the windows password request.

What do you mean by checking web credentials?

I'll check what EncryptedRegView is for and see if it can be of any help.
