Thread: [Unreal SMS Source - SMS spoofer \[Worldwide\]](#)

Frivolity - June 8, 2017, 4:42 pm

Unreal SMS was my baby back when I was active in marketplace. Eventually I moved on to a web based panel,

however I still have the source for my windows client, which works surprisingly well.

There is some clumsy code here and there, but I was very thorough when developing it so it should be bug-free.

I used Nexmo at the time but obviously it supports any API, as long as you know vb.net.

Here's a vid showcasing the client:

[Video: https://www.youtube.com/watch?v=tkfIV_g0oe4]

Features: SMS Spoofer

Contacts system News system (designed for NetSeal)

"Quick-fill" (see video) Material design

Bug free

Download: PM me

I may provide support if I have time, just ask

Oh it isn't?

Didn't see any rules stating so, so I thought it was ok

Barret - June 8, 2017, 6:36 pm

Your rep really convinces me :P i have doubts in this matter.

It's just a source for one of my earlier projects?

I don't really see how rep has anything to do with it.

Just speaking my mind lad, it jumps out that someone had a go at ya, so we check it and even source can be tainted.

I see that.

I haven't done anything malicious in the past, just got repfucked for some reason after I left HF a year ago

Put your source code on GitHub

Hopsin - June 10, 2017, 12:23 pm

Which theme did you used? I can't remember.

Post to PM isn't allowed:

This is fine.

Anyways, an SMS spoofer is nothing new. If you want to share it, just post a Github link.

DailyTrends - June 10, 2017, 1:04 pm

may i get a download please thanks

Good to know, the spoofer is pretty well-built & has some nice features and could save people a lot of time, so I decided to make it PM4download so it'll only be accessible to HQ users.

TRH4CK - June 11, 2017, 8:18 pm

I hope this does not include the web panel I made for UnrealSMS.

Of course not, otherwise I would've stated so in the OP

KingBodz - June 12, 2017, 3:29 am

Looks Great , Can you pm the source

So I PMed OP for the source and I can assure you the code is poorly written. Everything is stuffed into the forms, objects inheriting from IDisposable are neither closed nor disposed. Public fields are used instead of properties. Naming conventions are random. Designer crashes randomly if you try to close the designer window. When an error is thrown the message is copied to your clipboard. I saw empty event handler subs. The list goes on and on...

You make good points, the code is pretty sloppy.

I made this around 2 years ago, and while the code is sloppy the program should still function pretty well, at least it did when I last tested it.

Hopefully someone gets something out of it.

The thing is that you said it was well written and thus you only wanted to give it out to HQ members which I found complete and utter bullshit. If you don't want skids handling your crappy source, don't release anything at all.
