Var Manager

About:

Spoiler ([Click to View](#)) Inspired to Variable Managment in JSON. Supporting More Of 70K Variables in seconds. Without mysql or database!

Sample Code:

Spoiler ([Click to View](#)) PHP Code

```
<?php
require('varmanager.php');
$VarManager = new VarManager('varmanager.data.php'); // Optional, (Always .php to protect data)

// Optional, (Recommended)
$VarManager->encryptAll();

$VarManager->set('Testing Variable', 'This Testing its nice?: ');
$VarManager->set('Nice', "Yes");

echo $VarManager->get('Testing Variable') . $VarManager->get('Nice');
```

Cool project but you should never, ever, ever, ever, ever, ever, ever, ever, ever need that many vars.

"Reason Closed: Requested Closed"

I don't believe it's against the rules?

RumbleFrog - June 9, 2017, 5:40 am

I don't see the point of this. It's easily replicable through relative array and you have finer control over it

Hash G. - June 9, 2017, 6:44 am

You're reading 'variables' from a file - file you're closing and opening at each call to any of your methods. This will be horribly slow and really resource intensive. And hella stupid as well.

I mean, it's a nice attempt but please don't do that and don't use that. It's not really secured as well. Also, don't call encrypting a `base64_encode(utf8_encode($thing))` please. This is encoding, not encrypting.

Oh and try to follow the PSR when doing PHP code.

Zippy™ - June 30, 2017, 2:31 pm

Why would you save the data in a FlatFile? This can be easily done via just a Database?

Name one application that needs 70,000 variables set on startup.

that didn't answer my question...

also, not sure why my post before was deleted. hmmm
