Seems like a good build bud.

Defuse - June 15, 2017, 3:52 pm

That looks like a good ass rig when you get it setup I have a few questions

I want to make a similar build with i5 instead of a ryzen tbh that 6gb 1060 is perfect i'm pretty sure you can get 100+ fps on H1, Pubg & any other graphic intensive games.

Rn only got csgo, buying pubg and other games tomorrow.

GripeseE - June 15, 2017, 4:05 pm

What's your csgo rank? Maybe we can play, maybe pubg too. I'm GE rn on cs.

Atm mg1 , I had laptop with 30fps before that's why I suck. I should be dmg~ in few weeks since I get like 250+ fps and 144hz monitor now

GripeseE - June 15, 2017, 4:08 pm

Hmu when you get to dmg, I think the rank difference will be low enough that we can play then.
