Silent Multi Coin Miner
Lifetime Builder Access

Quick Summary

This miner can mine 3 different crypto-coin algorithms silently on your victims PC, it has features to let it stay hidden, persistent, silent and most importantly stable.

Items for saleLifetime BuilderPrice: 24.99 \$

Features: ? Startup

? Persistence

? Anti-Task Manager

? 3 Algorithms; Cryptonight, Scrypt, SHA256d.

One BuildPrice: 14.99 \$

Features: ? Startup

? Persistence

? Anti-Task Manager

? 3 Algorithms; Cryptonight, Scrypt, SHA256d.

? Each build will be thoroughly tested to ensure highest quality / stability.

FAQ

Q: Why choose our miner instead of other competitors?A: It has support for 3 different mining algorithms along with 10+ others which can be added at request.

Q: What is the miner coded in?A: It is coded in C# and has support for .NET 2.0 all the way to .NET 4.5 and will execute on any machine with .NET 2.0+ which is all 99% of consumer PC's.

Q: From a scale of 1-10 how stable is this miner?A: This miner has been tested on x32 and x64 systems, the startup is flawless and the miner will keep working unless it is manually found and removed.

Q: What is the current detection rate as of 11/06/2017?A: The current detection rate is 3/60 and the only mainstream AV to detect it is malwarebytes, but it is a generic which can be fixed by adding an icon making it a 2/60. VT scan:

<https://www.virustotal.com/en/file/c90bc878c23ab0c2b723068d8a267b1c361e80cf3a086d6c052f75afca71e05d/analysis/1496596646/>

Q: Does this work with <Generic Crypter>?A: I have no clue, how about you PM me and I send you a sample stub to try crypt, but it should work with most crypters, there's not really a reason for it not to.

Q: Stub size?!A: 7kb, very small, can be made even smaller with a compressor.

Q: How much can I make a day?A: Well, It depends, here is my way of calculating it, an LQ bot usually provides 30h/s, then do <bot count> * 30h/s and put it into this website with 0 power costs: <https://www.cryptocompare.com/mining/calculator/xmr?HashingPower=30&HashingUnit=H%2Fs&PowerConsumption=0&CostPerkWh=0>. That is a worst case scenario, with HQ bots the avg h/s could be 50 or even 70, it depends on the quality. That means 1000 bots running for 24 hours could result in 100\$ a day with the most LQ bots running for 24 hours. That is only for XMR though, other currencies like LTC vary and could make 50 cents a day from 1 LQ bot.

Q: Does the miner drop files?A: It drops one 2/60 ".exe" file which does the mining, I'll soon find a way to do it without drops, but it downloads quick and should make no difference.

Q: What is my sexuality?A: Cardboard.

Vouches

Vouch Copies Remaining: 0

Vouches will be put here.

undefined. - June 10, 2017, 6:47 pm

Litecoin is scrypt as far as I know
GLWS though

Rezpy - June 10, 2017, 6:49 pm

GLWS, will be buying when I grow my botnet a little bigger

Baitable - June 10, 2017, 6:50 pm

Fixed that, thanks for pointing that out ?

F-Nuke - June 10, 2017, 7:06 pm

Can I have the vouch copy? I'm willing to review it.

Baitable - June 10, 2017, 7:08 pm

(Jun 10, 2017 07:06 PM)F-Nuke Wrote: [\[CITE\]](#) Can I have the vouch copy? I'm willing to review it.
Yup!
I'll send a vouch copy your way within 5 minutes.

Lextian - June 10, 2017, 7:20 pm

Posting here to find this later for purchase and GLWS.

Baitable - June 10, 2017, 7:42 pm

Thank you, can't wait to deal with you :)

F-Nuke - June 10, 2017, 8:15 pm

I have been given a vouch copy of the builder.

First of all, the builder needs .NET 4.6.2 to build the silent miner. I'll repeat it again, it needs .NET 4.6.2 to build the miner, but the final miner executable (which you will execute to start the mining) only needs .NET 2.0. It uses Roslyn to compile the miner, thus, the 4.6.2 requirement.

The stub size is 7 kb. That's pretty amazing.

The coin I'm mining is Doge.

I'll be testing this on my Windows server. It has 12 cores. The miner utilized 8 cores. (I know this because I turned off the hidden mode in the miner).

Silent Miner:

Spoiler [\(Click to View\)](#)

Standard miner (optimized): Downloaded from here:

<https://bitcointalk.org/index.php?topic=55038.0>

Spoiler [\(Click to View\)](#)

I used 8 cores on the standard miner too, so that there will be a fair comparison. The standard miner is slightly faster, but that speed is pretty good for a silent miner.

Startup and persistence options work fine.

My startup entry:

(Jun 10, 2017 08:15 PM)F-Nuke Wrote: [\[CITE\]](#) I have been given a vouch copy of the builder.
-snip-

The miner utilizes only 8 cores to make the mining more discreet, it 50%-75% of the machines cores.

Anyways, Thanks for this amazing and very detailed review ?

FoKilPt - June 11, 2017, 1:16 am

Hurry up and get on Discord! I am ready to buy this miner right now!!!

(By the way, do you provide support? Does this builder need a miner.dat file? I know nothing about creating those, only pools and logins and whatnot. Would you be able to TV me after I buy your lifetime builder and make sure I make no mistakes?

VSBG - June 11, 2017, 3:21 am

check PM please.

I just buy Builder. And stub dont working. it need net .4

Baitable - June 11, 2017, 4:48 am

Just fixed that and sent you a version which compiles .NET 2.0, updated this to the store aswell.

Sure, I sent you a request, it's quite easy to setup.

(Jun 11, 2017 03:26 AM)Yani Wrote: [\[CITE\]](#) Does it drop files? Like the actual miner? If so, put that in your FAQ, because for serious people that's the only thing that matters.

Yea, It drops one file, I'll look into finding a way to embed it into the actual stub and then inject it into another x32 running process, Thanks for reminding me and added.

Mr. Robot - June 11, 2017, 4:49 am

If you could add in Sia I would buy haha

Baitable - June 11, 2017, 4:52 am

(Jun 11, 2017 04:49 AM)Mr. Robot Wrote: [\[CITE\]](#) If you could add in Sia I would buy haha
Completely forgot about Sia, I'll make a Sia miner stub now (GPU).

Edit: It's looking great, It's going to have GPU support, I would add CPU support but that'd mean the miner uses both PC parts which would completely drain the system, so what it's going to do it mine GPU at an intensity of 14.

I'll make a post once it's added to the store, thanks for the suggesting Mr Robot :)

coachhip - June 11, 2017, 5:59 am

if you want to test the stability on 10k+ bots, contact me.

also, if you were coding in c, you could hook that drop into a process instead of dropping it

try out c op:P

Baitable - June 11, 2017, 6:06 am

ah, I know, I hate myself for not knowing C++ / C, I'll try to find some sort of library for injecting though in the meanwhile while I learn C++ / C.

Anyway, I'll contact you soon, I'd love to see how it turns out :)

GL.

Your main PC had the error with the mining engine, I don't understand why, It's worked with all of

the machines I've tested, not sure why it isn't working for you.

I'll be testing this with 10000 bots soon, I'll post the results here.

VSBG - June 11, 2017, 10:09 am

So my main PC => Error

3 PC from my friend => Error

16/20 PC (bot) => Error

>>>>

Use [spoiler] tags.

It's worked for me, my mums laptop, my friends W7 machine and the person I gave the vouch copy to, I don't have anything else I can test this on, I have no clue why it just won't work for you.

I'll try this in 10000 bots and post the results here, sadly I can't help you since I don't own a machine which can't run the miner.

Once I am able to make it not work and show the same error it shows you I will work on it to fix it.

Total 24 real machine. Win7->W10.

Only 4 machine mining succeeded

This is my error ????

Baitable - June 11, 2017, 11:16 am

(Jun 11, 2017 11:14 AM)Cerato Wrote: [\[CITE\]](#) Total 24 real machine. Win7->W10.

Only 4 machine mining succeeded

This is my error ????

Your error is "retrying in 10 seconds", and that is most likely because it can't connect to the mining pool, I'll check through the src of the miner to check why that error is caused, but I've never had that error happen to me or the person I gave the vouch copy to.

CryptoWorld! - June 11, 2017, 11:21 am

I can take a vouch copy right now and post multiple results within an hour or so if you want me to :)

Win7 32/64bit / win10 32/64bit

If the same error occurs to me then something is wrong definitely

Cosa Nostra - June 11, 2017, 11:44 am

If there are any vouch copy's left will take one.

And test this!

GLWS!

Kind regards,

Katarina Du Couteau - June 11, 2017, 12:52 pm

You might want to check his trustscan before buying.

coachhip - June 11, 2017, 12:54 pm

pmd you back op, take a look:)

NightForce - June 11, 2017, 10:09 pm

Looks very promising. Best of luck with sales OP!

Friedrich Nietzsche - June 11, 2017, 10:15 pm

"It drops one 2/60 ".exe" file which does the mining, I'll soon find a way to do it without drops, but it downloads quick and should make no difference."

Use a RunPE/LoadPE (if you use a LoadPE you will need to patch PEB and other things to spoof the command line but overall shouldn't be too hard).

Good luck with your project.

Xete - June 12, 2017, 10:48 am

Remember to check his Trustscan and search his UID before purchasing!

GLWS OP

FoKilPt - June 12, 2017, 2:35 pm

(Jun 12, 2017 10:48 AM)Xete Wrote: [\[CITE\]](#) Remember to check his Trustscan and search his UID before purchasing!

GLWS OP

If you can't trust scan because you don't have UB3R, PLEASE look at all 4 pages of his reputation before buying like I should have done.

Be safe.

Baitable - June 12, 2017, 11:36 pm
