Thread: [\[UNIQUE\] Runescape 3 Cracker + Checker | Capture + Proxyless | No Captcha! \[UNIQUE\]](#)

Rhinemann - June 12, 2017, 11:33 am

Hello all, time to market off time copies of my Runescape cracker + checker. I'm going to make this thread transparent as possible to avoid confusion upon purchasing.

Limited number of licenses available!

Features: Completely Proxyless + CAPTCHAless

Captures: Login Details, Display Name, Coin Pouch, Bank Items + Quantities, Total Wealth

Both Compact + Detailed View

Search for Custom IDs when cracking / Checking

Information: Cracking will have a minimum of 120 Combos / Hour

Proxies are currently not supported

Extremely stable, personally tested for well over 100 hours

Checks & cracks ONLY for RS3

I have made over 1.7b total personally using this.

You require combo lists to run this, these will not be provided.

Purchase: Price: \$25 BTC / 30 days | \$25 ETH / 30 days

No vouch copies will be provided, feel free ask any questions. Since there are no vouch copies if you are genuinely interested I can provide you a live feed of the cracker running!

Please PM me if you are interested in purchasing.

Okay man

Zenomhunter - June 12, 2017, 3:54 pm

Are there any vouch copies out? If so i can leave an honest review :)

Tigri - June 15, 2017, 12:00 pm

Pictures look great buddy, really intressed in purchasing this. Pming you now.

Rhinemann - June 15, 2017, 4:29 pm

Still up for sale guys, should hopefully be getting some vouches soon. Copies have been sold.

justg - June 15, 2017, 4:55 pm

Posting to come back to this when I have the funds.

wtf - June 15, 2017, 6:01 pm

Awesome cracker just purchased a subscription allready got an account within a minute. ?

Rhinemann - June 16, 2017, 6:01 am

Thank you & I await your feedback :)

Power - June 16, 2017, 12:17 pm

Received the product, so far it is working flawlessly. This is pretty cool. Thanks!

Rhinemann - June 16, 2017, 8:30 pm

(Jun 16, 2017 12:17 PM)11:11 Wrote: [\[CITE\]](#) Received the product, so far it is working flawlessly. This is pretty cool. Thanks!

Thank you! More licenses are available, if you would like more than 1 month just let me know.

Rhinemann - June 18, 2017, 6:49 am

Still for sale, hit me up in PMs.

justg - June 18, 2017, 8:29 am

Bought this and ran it overnight - great product. Easy to follow & use interface. Only thing that sucks is the 5 minute "too many incorrect logins", but that's unavoidable. Made about 80m overnight.

vouch.

Rhinemann - June 19, 2017, 11:41 am

(Jun 18, 2017 08:29 AM)justg Wrote: [\[CITE\]](#) Bought this and ran it overnight - great product. Easy to follow & use interface. Only thing that sucks is the 5 minute "too many incorrect logins", but that's unavoidable. Made about 80m overnight.

vouch.

I will work to implement proxies and such at a later time to avoid this, make it a choice :).

wtf - June 19, 2017, 3:57 pm

I think proxy support will really improve this project.

CONNquest - June 19, 2017, 4:18 pm

I would like to see a .gif if that's okay? to see how it works before i buy.

Rhinemann - June 19, 2017, 5:32 pm

Thank you for the vouch

CONNquest - June 25, 2017, 3:17 am

Product is bad, crashes when loading combos with a poor method of importing, makes you wait 5 minutes before it checks again and once you see that message once you see it all the time so it wouldn't check that many accounts like OP said. Fake vouches are fake vouches without any proof.

McRoyal - June 25, 2017, 4:15 am

(Jun 25, 2017 03:17 AM)CONNquest Wrote: [\[CITE\]](#) Product is bad, crashes when loading combos with a poor method of importing, makes you wait 5 minutes before it checks again and once you see that message once you see it all the time so it wouldn't check that many accounts like OP said. This is 5 minutes wait because the checker tried to log in into In-valid accounts from your combo. Wait until the program support proxies so you don't need to wait anymore.

CONNquest - June 25, 2017, 4:17 am

Yeah apart from you see this almost every "other" account once it's already appeared once. It's checked 97 accounts in over 1 hour so the statement of 120 accounts per hour is totally wrong.

justg - June 25, 2017, 9:30 am

Could easily do 120+ accounts if most of your combos are working.

The 5 minute timer is from Jagex, and is due to the fact you're not using proxies (since they aren't supported yet).

Never had it crash when loading accounts - only issue I've run into is if you have more than 2 columns in a row (multiple : 's)

I have noticed that the bank checker has been off a few times - especially with members items. I've had accounts that say their worth are 500k-1m, and actually have 1.5-2m on them when you sell everything.

The 5 minute block comes from incorrect logins so obviously it's not going to be less than 120 p/h if they are all valid but it doesn't say that in the original post it means in general it checks 120 p/h when it doesn't. Also the import I don't have multiple instances of : in a column its more because I have a bigger combo because when the combo has been split it works but that's when the lists have been split down to a couple of k per list.

All in all it's really not what is explained because speeds ain't what he says, crashes, functions don't work. Shouldn't really sell a product that's 75% finished to try earn some easy cash. Maybe select a few HQ BETA testers but to release to public for sale when it's not complete, it crashes, not as fast as what he says it is.

Fair enough. I tend to run combolists of only 750-1k accounts, so I don't run into that crashing issue. I tend to avoid the timeout by putting an account you know works within a group of completely unknown logins (i.e. grabbed from a random location, possibly not RS related or OLD).

Your combos are bad thus why you are getting the error (you evidently can't have two : per line). Waiting eagerly for proxy support though to skip the pesky 5 minute temporary bans.

So you assume my combo's are bad? They are runescape database related combos, sorry forgot this program is for minecraft.

?

Also I've explained I don't have two instances of : per column these are filters combos fresh from runescape databases and this pesky 5 minute block appears more often than not once it's shown once.

SIM-1230922 - June 25, 2017, 10:20 am

Everyone else can load it fine, one or more lines in your combolist are malformed. And the 5 minute block is not controlled by the coder, it's Jagex who implemented it for very evident reasons. What part about that don't you get?

McRoyal - June 25, 2017, 10:28 am

The two : problem is not real. The real problem is from the program itself I think it can't run more than 1k combo or something like that as someone mentioned before.

This does seem to be a small issue - with the fix being simply break up your combolists into smaller ones.

Another issue I have recently come across is bankpins, which I have PM'd Naiked about - the program DOES NOT capture accounts that have bank pins - I.E. it does not put them into the "Quick View" or hen you export, as it does not have all the data it needs to complete the table, therefore it skips the account as if the login was incorrect.

CONNquest - June 25, 2017, 10:49 am

Well you can't capture bank items from accounts with bank pins anyway there is no way to bypass that one.

(Jun 25, 2017 10:20 AM)Shaco Wrote: [\[CITE\]](#) Are you dense?

Dense? ?

I'm just speaking the truth, my problem is not the double : in a column like I've said to you twice now, my combos are also not malformed.

5 minute block can be bypassed also without the need of proxies as some other coder has done the exact same with multi-threading.

So which part are you trying to put across? Or are you just "dense"?

(Jun 25, 2017 10:28 AM)McRoyal Wrote: [\[CITE\]](#) The two : problem is not real. The real problem is from the program itself I think it can't run more than 1k combo or something like that as someone mentioned before.

Exactly my point, it's not due to the fact there is more than one instance of : per column it throws the error when importing a larger .txt file of accounts.

AngelOfLiberty - June 25, 2017, 11:07 am

hello i would like to purchase program

CONNquest - June 25, 2017, 11:19 am

Think OP should also have some statistics added to see progress on how far you are through your list, and how many are good or bad accounts.

Rhinemann - June 25, 2017, 1:40 pm

I decided to snip my original response to create a more civil, informative post which I will link to in the main thread for all current + future customers. Here we go!

1. Bank pins not being recorded

This is indeed true and was designed so by me, I did not want to have a magnitude of account stored with bank pins as I was cracking for bulk vs solo accounts. I have used the cracker for months before it was even for sale and this was the best for me. You will see an option to store + export bank pins on the new GUI.

2. The loading error

This one seems to be giving a lot of people problems, I have the advantage of having years of experiencing cracking & in that time I learn't to correctly format all my combos which I assumed everyone also also did. Clearly this wasn't the case. The program itself can load lists upto and above 1 million combos quite easily (obviously not practical in the currently build)

The error is created by loading account with an extra ":", now let me explain why. Upon loading the accounts they are taken from a list object to a stripedMenu which has two columns split by a ":" if you have multiple it will attempt to create addition columns which do not exist. That's why you get the out of bounds error.

This has also been fixed in the new GUI. If you still are adamant that the program cannot support the combos then you're plain retarded, I am sorry. I have given this explanation to everyone who asked for it & even upon purchase now. You're simply wrong if you think so, the program doesn't even need to be re-opened once this error appears you can just try another combo list instantly...

3. Timeout error

The program was created with a hardcoded 3 second timeout as I was working on a VPS while creating this project & at first it was for personal use only. If you are experiencing an error in the log it's because you're not connecting in 3 seconds even though it might seem like you are.

I have made this option customizable so avoid this problem in the future

Now, please contact me for the discord channel in which updates will be published. This will be released in the next few days followed by proxies afterwards.
