Thread: [\[NOOB QUESTION\] Make webbrowser navigate to the text box?](#)

JAS - June 13, 2017, 12:37 pm

If i didnt explain it well enough in the title. I want to make it so if a user types in lets say www.google.com into a text box and then clicks a button it redirects the web browser to that url... I cant quite figure it out.. (new to c#)

Really want to know this, thanks!

Lucifer Morningstar - June 13, 2017, 12:54 pm

Code private void button1_Click(object sender, EventArgs e)

```
{
    System.Uri uri = new System.Uri(textBox1.Text);
    webBrowser1.Url = uri;
}
```

If you are using visual studio there is a toolbox item called "WebBrowser" to put into your form. It does everything for you, here is the documentation

[https://msdn.microsoft.com/en-us/library/system.windows.forms.webbrowser\(v=vs.110\).aspx](https://msdn.microsoft.com/en-us/library/system.windows.forms.webbrowser(v=vs.110).aspx)

Pro-tip: Always check the properties of that element. Usually there is a method.

browser.Navigate(textbox.text)

You should learn how to use Google and how to use MSDN. MSDN has almost every class in C# and VB.net (and F#) documented really well and usually with example code.
