Thread: [Computer runs slow](#)

perpan123 - June 13, 2017, 1:33 pm

Hello guys

i want some help i dont know if i have virus or not since my anti virus is crap i think. So i dont if it is virus infection or not.. However i have defragged before and have used ccleaner and nothing has helped so far.

Please help me out here and thanks for taking your time.

Download [fixlist.txt](#) file and save it to the Desktop.

NOTE: It's important that both files, FRST/FRST64 and fixlist.txt are in the same location or the fix will not work.

NOTICE: This script was written specifically for this user, for use on that particular machine. Running this on another machine may cause damage to your operating system

Run FRST/FRST64 and press the Fix button just once and wait.

If for some reason the tool needs a restart, please make sure you let the system restart normally. After that let the tool complete its run.

When finished FRST will generate a log on the Desktop (Fixlog.txt). Please post it to your reply.

Please download [Junkware Removal Tool](#) to your desktop.Run the tool by double-clicking it. If you are using Windows Vista, 7, or 8; instead of double-clicking, right-mouse click JRT.exe and select "Run as Administrator".

The tool will open and start scanning your system.

Please be patient as this can take a while to complete depending on your system's specifications.

On completion, a log (JRT.txt) is saved to your desktop and will automatically open.

Post the contents of JRT.txt into your next message.

Your computer should be clean now, I'd advise you to change all your passwords just to be safe.
