Thread: [Recommend me an creating builder and stub method](#)

AhmedAhmedEG - June 14, 2017, 8:05 pm

I created an simple downloader and now i want to make an builder for it so i wanted a way to to make in the stub an variable that it's value is from the builder's text boxes and checkboxes i found about mono.cecile but it's very advanced that i can't understand it so can someone recommend me an method and if can a link for an guide to use it

CodeDOM is the easiest you can get in my opinion.

As i read abote CodeDOM i have to but all the downloader code in an text file with some import and then the builder will compile it depending on the options selected in it like the direct link but the problem is that my downloader have a waaay multiple too many much forms that i don't know to but all thier code in one piece of code so what can i do?
