Thread: [How to easily read the WIFI packets on the same network](#)

FossoyeurBTC - June 16, 2017, 3:22 am

Hello people,

I would like to be able to read the packets on my network with my own .exe.(using a laptop)

Do you guys please have an advice/video from youtube so that i could know where to start please?

<https://github.com/Hearen/Noodle-s-Sniffer>

FossoyeurBTC - June 16, 2017, 4:20 am

Thanks for the tip.

As you can see on the screenshot here : <https://puu.sh/wlDZh/88f38f3610.png> (just remove the ") the only IP that we can see is 192.168.1.16, which is mine. Even though I was loading a video with my phone (192.168.1.14), I could never see it's IP, and this is what im trying to get.

Maybe I did something wrong?

Just use Wireshark. It's the gold standard for packet-sniffing.

FossoyeurBTC - June 20, 2017, 3:40 am

Thats weird, i was checking for answers every single day, and i can only see it now.

Thanks for answering. I dont want to use wireshark because Id like to catch packets in real time with code in order to manipulate them...

Thanks in advance
