That's all up to your social engineering skills I believe.

this is a little blackhat but you can always send an email flood with the email and an sms floof with the phone number.. using a spoofed email and/or phone number of course. Either one you use, you can also send a link (auto download file) to the victim, and you can also spoof the link as well, make the email or sms message pretend to look like porn or a popular game or platform.
