Thread: [Need help with style.css](#)

Dotexe - June 17, 2017, 6:36 am

Hello people, recently started to study web dev, i tried to do something but im confused, basically what i want is when im on login/register page to use style.css

but after all when im in index.php to use a different style. How to do that ? i tried to create another css but with different name and when im passing through login to use diffstyle.css (example name) but nothing works. I'm really new into this so it might sounds stupid :D

Nachfolger - June 17, 2017, 7:01 am

what?

Index.html

Code <head>

```
<link rel='stylesheet' type='text/css' href='diffstyle.css'>
```

```
</head>
```

Login.html

Code <head>

```
<link rel='stylesheet' type='text/css' href='login.css'>
```

```
</head>
```

It's as simple as that.

How did it not work? Post your code. If you're not seeing changes, it's likely cached. Add a query to the link.

Code <head>

```
<link rel='stylesheet' type='text/css' href='diffstyle.css?v=0.01'>
```

```
</head>
```
