Thread: [MaterialSkin help](#)

hunters - June 18, 2017, 2:14 am

Hi HF, ?

I have a problem. I download the MaterialSkin source from <https://github.com/IgnaceMaes/MaterialSkin> and build the skin DLL but i got too many errors while build the DLL. So, i compile the DLL from NuGet but tht was old version. New version contains new controls like ProgressBar and ListView. Can anyone have the latest version of MaterialSkin.dll with Progressbar and listview. please share.

Thank you so much. ? ? ?

? ? ? Thank you [@Wops](#) ?

Bad quality of ListView in MaterialSkin :(
Can anyone know how to make it good?

I 'can't know' how to make it good, but if you want your program to stand out I suggest just using the default winforms controls with little GDI (or even without you can make something look really good) or making your own theme.

okey ?

im lil'bit new in VB.NET.
