Thread: [Need Private silent miner stub with Builder](#)

**John McClane** - June 19, 2017, 5:02 am

Hello there, i need someone how can provide me silent miner with private runpe supported Neoscrypt algorithms every other algorithm i dont care.

Miner must't drop any files to disk it must be executed COMPLETELY in memory

Builder must be without dependence maybe Coded in C++ or what you want mustn't be coded by .NET

The miner output stub size must be as little as possible.

- Must be Smart CPU - mines constantly but adapts to system usage, for example, it will use 100% of the CPU after the system has been completely idle for several seconds maybe 15 sec

- Completely Silent
- Completely Native
- Must work on cryptocurrency Feathercoin (FTC)
- Execute in memory, no drop
- Anti Task Manager
- Anti VM and Anti Debug on request
- Anti sleep - Prevents computer from sleeping!
- Mutex

ping here if anyone can do this, We'll talk about it price.

Thanks

What kind of price range are you looking at for this - I might know the perfect person to do this job for you.

I'm newbie to hackforums. I need assistance with what's happening here and how I can earn online.

Its been very cold here since i dropped out of school. Really need your suggestions. Thanks a million.

I wouldn't buy any of the trash which is being sold here on HackForums. No good malware is sold publically.

These are all pretty basic features, you should contact a programmer.

I'd like to add to this as well that none of the miners here on HackForums execute in memory, they all drop to disk.

**Tronsmart** - June 22, 2017, 2:08 am

Any miner which uses GPU will require framework 3.5  
even tho the miner is coded in native language, GPU you require framework, so you can also keep you Options Open from .net miners

**John McClane** - June 24, 2017, 7:40 am

Still need this.

Quote:Requirements:

Must supported Neoscript algorithm on this mining pool: miningpoolhub.com  
it needs to have Smart Cpu, when person working not to cause problems to him, when the PC is idle to use all full power, I need it to work on both x32/x64 and if its possible to make smart GPU too  
Builder must be without dependence maybe Coded in C++ or what you want

- Completely Silent
- Completely Native
- Must work on cryptocurrency Feathercoin (FTC)
- Execute in memory, no drop
- Anti Task Manager (if its possible, if not impossible i dont care this feature)
- Anti VM and Anti Debug on request
- Anti sleep - Prevents computer from sleeping!
- Mutex

Also if its possible to make remote control for example to look at host or server, how many bots had executed silent miner.

screen: <https://i.gyazo.com/4b5d957e975e58c4974c...2dce18.png>

Some other guy wrote me such a project but he didnt have Smart CPU - mines constantly but adapts to system usage, for example, it will use 100% of the CPU after the system has been completely idle for 30 seconds

all CPU worked on 100 % and i didnt want same thing :)

if you can code me this i can pay you for bin and also for builder, just need to know how many days you want to create this, thanks

I don't understand why you can't search for it.. Like why are you expecting people just to give you links to things, GO LOOK!!! Plus you aren't gonna really find many Hq miners sold publicly, you are gonna either just have to purchase a public one or go find a programmer to code you one. But that is not going to be cheap. Good luck.
