Thread: [Flair Crypter \[Private\] FUD, rare features, private RunPE, Private stubs available](#)

Avira - June 20, 2017, 1:09 pm

Due to honeypots and LQ customer filtration, we are requiring every new client to either PM or message us on jabber to purchase. We will not ever be implementing auto-buy of any sort in order to keep the crypter somewhat private.

Private Stub

We are offering private/unique stubs for 50\$. The stub will ONLY be given to you, so if you didn't use it for a month for example, it would still be FUD. We recommend this if you need surveillance on a few computers or so forever, or if you are mass loading bots (that you own).

How to buy?

Add either of the jabbers, with your HF username, and the plan you would like to buy. We will then send you a bitcoin address and wait for 1 confirmation before we send you the crypter. To receive updates, due to crackers and leakers, we will be requiring a new download of the crypter in a password protected archive when there is a new version available, which can be given over jabber or PM. We know these seem like lengthy steps to take, but ultimately it will pay off because we are protecting our software the best we can.

RUNTIME videos coming soon!
More features coming soon!

T.O.S

- Spoiler [\(Click to View\)](#)
1. You may NOT use our crypter or stubs to crypt Zeus or other bots like it.
 2. You may NOT upload to sites that distribute such as virustotal, jotti, or metascan.
 3. You may ONLY upload to sites like <http://viruscheckmate.com> , <https://nosharescanner.com> and <https://dyncheck.com>
 4. Any attempts of leaking the software or "cracking" will result in an instant termination of license and a community alert.
 5. Any thread trashing without consultation will result in a license suspension/termination depending on the situation.
 6. You can not offer free or paid crypting services or crypt files for ANYONE else but yourself.
 7. The usage of this crypter is intended for use on computers you own, not anyone elses.
 8. If any of these terms or conditions are ignored we reserve the right to ban your license.

Currently FUD

Thank you.

Off topic: Are you on the server? Would be nice to see you there.

Uefi - June 20, 2017, 1:30 pm

(Jun 20, 2017 01:24 PM)Avira Wrote: [\[CITE\]](#) Thank you.

Off topic: Are you on the server? Would be nice to see you there.

Allow me to brew a pot of coffee and wake up, I have not been sleeping as of late and it appears to be 5:30am. I'll PM you for the link and take administrator shortly.

EPS Tech - June 20, 2017, 2:57 pm

No mention of # compatibility.

What will be the output for native files?

Avira - June 20, 2017, 3:09 pm

Output will either be .net 2.0 or 4.0, but there is going to be implementation for native stub soon.

Would prefer questions to be asked via Jabber: flaircrypter@xmpp.jp

And yes, Recmos is compatible.

Cheese - June 20, 2017, 3:24 pm

Avira knows what hes doing.

Good luck with sales.

n0\$f3ratu\$ - June 20, 2017, 5:32 pm

PLEASE don't take this the wrong way.

I am NOT here to throw your selling in a bad light or anything like that,
but at least half of those features are detected on runtime, no matter how private your runpe is.
If you can and have the time make videos using those features on av's like avast and kis at least.
Good luck with sales, but until you prove somehow that using all the features bypass at least known av's at runtime..

Avira - June 20, 2017, 5:36 pm

Will try and get a video made tommorow, if not certainly the day after.

No offence taken, thank you for your reply.

ForceJew - June 21, 2017, 1:09 pm

The guy who made the gui was on crack probably.
If the crypter is good tho gl.

Avira - June 21, 2017, 1:50 pm

(Jun 21, 2017 01:09 PM)FORC3FI3LD Wrote: [\[CITE\]](#) The guy who made the gui was on crack probably.

Thank you, Pierro bird.

Thanks to everyone else who replied, much appreciated.

moufmouf - June 23, 2017, 7:23 am

waiting for the videos so we can buy this

Avira - June 23, 2017, 3:50 pm

(Jun 23, 2017 07:23 AM)moufmouf Wrote: [\[CITE\]](#) waiting for the videos so we can buy this
Runtime vids on monday.

You can wait until then to purchase if you wish, I understand.

narc0tic - June 24, 2017, 8:19 am

As a fellow member of the AntiNanomen movement I would like to vouch for this product.

All though the GUI looks like cat shit and half the features sound runtime detected af, if you just use core features this looks like good crypter.

glws

Avira - June 24, 2017, 10:34 am

glws

Thank you for the vouch.

The other features are there as a kind of protection for the stub, I recommend using them if the PC has a low qual AV and you want the stub to remain there without manual removal.

All you should need for regular usage is startup and maybe persistence (if you don't know how to evade user suspicion very well.)

Milan Hermanus - June 24, 2017, 11:13 am

Thanks for the kick from your discord group, i was going to be constructive but i see no reason in being polite now.
Sigh..lets go

"Private RunPE"

You did not invent the pe loader, nor did you invent the shitty "runpe" (aka the half-arsed manualmap). There are limited ways to make a "runpe", so stop the bullshit.

"Strongest botkiller"

Oh really? How is your botkiller the strongest?

"Private stub \$50"

Why are you even selling private stubs in .NET? You can randomize a .NET module so much, that a "private" stub wouldnt make sense

Cheese - June 24, 2017, 11:43 am

"Sigh.. lets go"

I banned you from the discord group because you're acting your age.

You got got mad.

You came here to sales trash because you were mad.

"Sigh.. lets go"

Your false conceived sense of self importance is so prevalent that I am bombarded with PMs everytime you speak asking for your removal. You were 'going' to be constructive? Sure.

"Sigh.. lets go"

You came here to sales trash the crypter yet you were just begging for the crypter minutes earlier?

Get off this sales thread.

Milan Hermanus - June 24, 2017, 3:10 pm

Get off this sales thread.Yeah way to go, take shit out of context you no-namer.

My message right after "begging" (read: asking for a sample) was that i'd be constructive. If you spent 30 seconds of your useless life looking up my previous projects, you'd know i know what i am doing when it comes to malware and crypter development.

Do i have to explain it like you're 5 years old?

I asked for a sample so that i would look at it, and tell OP's developer what he could do better?

I've helped numerous crypter developers on hackforums.

I said I would speak to dev, but then you started rambling on about being "superior".

I appreciate it if you were trying to help but it seems you were just trying to get a sample and then roast the imperfections.

Juicers27 - June 25, 2017, 10:00 am

he never come online on jabber..

mrund - June 26, 2017, 8:27 pm

Looks very promising, think I will give it a go

Avira - June 27, 2017, 8:51 pm

Updated thread with Avast Runtime video (Bottom of thread).

MSE, KAV and AVG to come later today.

n0\$f3ratu\$ - June 27, 2017, 9:53 pm

(Jun 27, 2017 08:51 PM)Avira Wrote: [\[CITE\]](#) Updated thread with Avast Runtime video (Bottom of thread).

MSE, KAV and AVG to come later today.

I know how you feel when this is coming from another crypter coder/owner, but I have to say it.

1. What is "detected"?... a server of what?

From my point of view it can be a simple project with nothing inside.

2. Even if "detected" is a real server your test method is NOT valid.

Make a video using startup!

3. From what I saw in process hacker your file didn't finish loading.

I could go on, but I am sure you get my point.

Have a great day (I mean it) and try to make a proper video demonstrating av runtime bypassing using your crypter. ???

It was an old sample of imminent monitor which is detected by every AV I will be testing (If by any chance it isn't, I will find a detected sample from a sperate malware family)

Sorry about no startup, I was tired and rushed the video due to an earlier reply of my stating I would upload the day before.

I will make a video with startup tommorow if not the day after.

Thank you for the civil reply, I am happy to have criticism aslong as it isn't delivered in vain.

Have a good day yourself.

Riddick - June 28, 2017, 11:50 am

Vouch for Avira, this guy knows his shit when it comes to crypters and the like.

Do not hesitate to try this crypter out.

GLWS.
