Thread: [Custom VB.net Licensing System](#)

AsSaSs@iN - June 20, 2017, 10:58 pm

I need someone to create a custom licensing system for a piece of software I have developed (not related to hacking, so simple licensing is ok).

Something like existing services however I need to also host the online, web component as above all I need reliability. I cannot afford to go with other options as I need to ensure the service continues in years to come.

What I need:VB.net licensing system

Must be able to limit connection numbers and computer installations (like NetSeal)

Serial key purchasing on my own personal website, as well as the ability for users to retrieve passwords, usernames etc if they forget them. I need the dashboard to be on my server.

Software update system integrated where I can deliver updates to users.

Will negotiate price over PM with user. Happy to pay a reasonable amount for good, high quality work.

NOTE: Full amount will strictly only be delivered on the successful completion of this work. The user must be ok with this.

Please only contact me if you're confident you can achieve what I require.

Thanks,
-AsSaSs@iN ?
