Thread: [1000 pcs online 24/7 how much can I make?](#)

Jendo - June 22, 2017, 7:08 pm

Hello fellow members,

So a friend of mine has a RAT which always has a least 1k slaves online, mixed worldwide from all countries, like 50% USA and Europe first world tho
how much can he make per day or per month in USD mining the most profitable possible coin silently? please give me estimates

Sorry if this the wrong section but it says mining

Cylow - June 22, 2017, 7:12 pm

Depends on the power of the computers. One of them may be stronger than fifty combined.

Impervious. - June 22, 2017, 7:15 pm

We can't tell you as every different slave likely has a different pc/laptop.

Still i'd assume u'd make more than pennies though.

Just average computers, give me an estimate please.

Just normal computers with average specs, give me an estimate if you could please

? sentient ? - June 22, 2017, 7:26 pm

Nobody will be able to give you an estimate, my best advice would be to mine XMR and ETH or a coin of the sorts.

Reporter - June 22, 2017, 7:32 pm

Either start mining on them if you want, but expect some to reinstall due to their computers being slow?

You could also sell these are services

Just start mining on them if you want

Jendo - June 22, 2017, 7:40 pm

Can't any one give a wide estimate? even something like 100 - 1500 for example lol

Guardians - June 22, 2017, 7:45 pm

Let's say you get 1 mh/s per computer. (keep in mind a gaming card can range from 10-35).

That's \$170 a day mining eth.

Let's say half of that for a conservative estimate and you'd get around \$85 a day if they run 24/7.

I'm very thankful for you mate, that what I was looking for.

Thanks very much
