Thread: [Anyone have a posion plugin for the latest version of MC?](#)

FunnyHands - June 23, 2017, 2:48 pm

I need it for this server I jacked to make sure they can't completely lock me out when they get control of the server CP again.

FormerlyS - June 24, 2017, 11:43 am

I could write you one if you pay me. LMK

GenericSkid - June 24, 2017, 6:23 pm

I had one that I abandoned. Its features:

Server file navigationList files (folders + directories)

List folders

List directories

Print working directory

Print file contents to chat (If file is too long, a specific line can be requested)

Navigate to directory (Relative to current directory, '..' to go up a directory)

Clear chat (Just sends a dozen newlines)

Remove file / directory

Create directory

Download file

Execute file

In-game hacksGod mode

Insta-mine

Insta-kill

Build-perms-anywhere

Misc thingsCheck open ports

Exit JVM

If you are willing to wait a day I can get this cleaned up and posted for anyone to check out. I had a few things that I didn't bother to implement that I'd like to finish if you're interested (Server details / network config / process list / file upload / server-jar persistence injection)

Yes please, that sounds so advanced, can't wait to try it out, gonna grief some servers by becoming a 'dev'.

myokan - June 25, 2017, 6:27 pm

Not sure if it works with 1.12 but Squish is a great poison plugin to check out - it lets you execute commands as console, download files (exe & jar), and has a built in FTP and SSH server.

GenericSkid - June 25, 2017, 11:32 pm

It's getting late but I'm pretty much done refurbishing the old plugin I made. I'll make a thread for it tomorrow. I also added some new things ?
