Thread: [File to Email Sender](#)

ip99.ga - June 23, 2017, 4:34 pm

Hello there,

How do you make a batch file that when executed, it sends a file from their PC to my email?

Thanks in advance!

Sajuuk - June 24, 2017, 12:42 pm

<https://emkei.cz/>

Fill the existing fields with VBScript/JavaScript or learn a more advanced language that supports networking.

You need 3rd tool like blat.net

Powershell scripts like:

stackoverflow.com/questions/36355271/how-to-send-email-with-powershell

or

ss64.com/ps/send-mailmessage.html

.vbs also can do the trick but i dont like it :)

You should like it ? ?

[Video: <https://www.youtube.com/watch?v=3oAMo-i221Q>]

I did a few years ago a HTA with vbscript to send email via gmail and some other stuff (French version) but, i don't know if this version will work on the new system or not ?

Ok i found and tested this .vbs script :)

If you use Google SMTP server you need allow access to less secure apps or wont work.
(google.com/settings/u/2/security/lesssecureapps)

Sender.vbs @ pastebin.com/f5mBLRTg

I would prefer using a ftp server instead, works fine with just vbscript alone.

Sphere of Madness - *August 3, 2017, 11:22 am*

I prefer steal whole HDD but this is not the question...
